POLARAD MICROWAVE SPECTRUM ANALYSIS EQUIPMENT

VISUAL MICROWAVE ANALYSIS 10 to 44,000 mc

DIRECT - READING SPECTRUM ANALYZER

SPECIFICATIONS

Five sensitive plug-in tuning units Dispersion: 400 kc to 25 mc Resolution: 25 kc Internal Marker: ±14 mc internal 100 db continuously

variable (STU-1, STU-2A, STÚ-3A) I-F: 50 db continuously variable

COMBINATION SYNCHROSCOPE - SPECTRUM ANALYZER

PROVIDES TIME AND FREQUENCY DISPLAY

Model TSA-S **SPECIFICATIONS**

Five sensitive plug-in tuning units Dispersion: 400 kc to 25 mc Bandwidth: 5 kc, 50 kc, 500 kc and 5 mc Internal Marker: ±14 mc Sweep Rate Synchroscope:

2, 10, 100, 1,000, 10,000 $100,000~\mu sec$ per screen

FREQUENCY DISPLAY:

DISPLAY:

WIDE DISPERSION SPECTRUM ANALYZER

NARROW AND WIDE PULSE ANALYSIS

Model TSA-W

SPECIFICATIONS

Five sensitive plug-in tuning units
Dispersion: 100 kc to 70 mc (2 ranges)
Resolution: 7 kc and 50 kc Internal Marker: ±40 mc Screen Display: Linear or log

nulses narrow as 0.1 usec. may be adjusted down to To test missiles, radars, microwave components, telemetering and multi-pulse transmissions

ALL POLARAD SPECTRUM ANALYZERS FEATURE:

- 1 to 30 cps adjustable sweep rate
- Direct-reading UNI-DIAL tuning control
- High accuracy, resolution and sensitivity
- Frequency accuracy, ±1%
- . Non-contacting klystron cavity chokes for noiseless tuning
- Five-inch flat-face CRT

Display Unit-Models TSA, TSA-S and TSA-W. Five interchangeable plug-in tuning units:

Model No.	Equipment	Frequency Range
DU	Spectrum Display and Power Unit	
STU-1	R-F Tuning Unit	10 to 1,000 mg
STU-2A	R-F Tuning Unit	910 to 4,560 mg
STU-3A	R-F Tuning Unit	4,370 to 22,000 mg
STU-4	R-F Tuning Unit	21,000 to 33,000 mg
STU-5	R-F Tuning Unit	33,000 to 44,000 mg

Sensitivity: (minimum discernible signal)

STU-1	10 to 400 mcs -85 to -95 dbm
	350 to 1,000 mcs -80 to -90 dbm
STU-2A	910 to 2,200 mcs -85 to -95 dbm
	1,980 to 4,560 mcs -75 to -87 dbm
STU-3A	4,370 to 11,000 mcs -77 to -90 dbm
	8,900 to 22,000 mcs -65 to -85 dbm
STU-4	21,000 to 33,000 mcs -57 to -75 dbm
STU-5	33,000 to 44,000 mcs -50 to -65 dbm

MULTI - BAND. SINGLE-UNIT SPECTRUM ANALYZER

Complete frequency coverage, 10 - 40,880 mc. in one single self-contained unit.

SPECIFICATIONS

No additional tuning units required.

Dispersion:
10 to 55 mc: 500 kc to 5 mc, adjustable
55 to 40, 880 mc: 500 kc to 25 mc, adjustable Resolution: 20 kc Internal Marker: ±14 mc

Set of BANDPASS FILTERS, 750 to 12,000 mc, available to eliminate spurious signals and harmonics in reception and spectrum analysis equipment. Especially designed for use with broad-band single-unit spectrum analyzers.

MULTI-PULSE SPECTRUM SELECTOR

Permits spectrum analysis of individual microwave pulses in a pulse group when used with a Polarad Spectrum Analyzer.

Any pulse in a complex coded signal may be isolated for

By Fred Venditti

If you want to see what our Denver teenagers are up to, be sure to attend the Metropolitan Denver Science Fair at the University of Denver Field House on March 19th. The work these youngsters are doing is more than compensation for a few stolen hub caps and the rock-androll antics of some others in their generation. The Science Fair also speaks well of the education our youngsters are getting. In working with the Science Fair Committee we have come to appreciate more deeply the fact that the science teachers are doing a good job.

Speaking of science students and Admiral Rickover, it does not seem too presumptuous to ask, "If everybody studies science, who will take care of our laws, business functions, painting, sculpturing, and literature?"

 $021 \times 10 = 210$

The Electronic Electrical Institute began evening electronic classes in January. $13 \times 03 = 51$

A new corporation, Computronics, Inc., has been formed by David Miller, formerly of CRC and James Hurlbut of Hytronic Measurements fame. The new firm will manufacture analog computer components. O. E. Stoddard has been appointed plant manager of the firm.

Everybody who has heard, at least three times in the past year, that Thompson-Ramo-Wooldridge is selling out to Martin or vice-versa—raise your right hand.

$11 \times 03 = 33$

The Electronics Division of Denver Research Institute has a new contract with Rome Air Development Center to investigate and evaluate a secure communications cable system.

 $10 \times 03 = 30$, finally

The following news and miscellany is presented for your edification and/or amusement. If you would like more details, refer to the subject personnel. If we had more details we'd print them and get this X!X! column filled up.

 $7 \times 3 = 21$

Carrier Corporation has recently sold its interest in Colorado Research Corporation to Bell and Gossett Co., of Morton Grove, Illinois. B and G Co. is a wellknown manufacturer of fluid-handling equipment. Their Dualex Division is engaged in the manufacture of a wireless typewriter communication system. The acquisition of CRC, Inc., broadens the electronic program of B and G to include digital television communications, analogto digital converters and analog computer systems and components.

Recent personnel changes at CRC, Inc., are: Carl R. Wendt, IRE Fellow, who was Chief of Communications and Radar at Martin Co. Carl will be Manager of the Research Department at CRC.

Mr. Charles Crandall, formerly of the TV Broadcast Transmitter Division of General Electric will be Assistant Project Manager for digital and TV systems.

George Lord, formerly of the University of Denver, Denver Research Institute, and Dick Straver, a recent M.S. graduate of the University of Nebraska, are staff engineers in the digital TV group.

 $00111 \times 00011 = 10101$

The Board of Directors of Hathaway Instruments, Inc., announced the appointment of Dr. Willis G. Worcester as Director of the recently formed corporation. Dr. Worcester received his Ph.D. from Stanford University in 1952, and is presently Executive Director of the Engineering Experiment Station and Assistant Dean of the Graduate School, University of Colorado.

Formation of a new special products division of Hathaway Instruments, Inc., Denver, Colo., was announced this week by Warren D. Tilton, Vice President of the 20-year-old instrumentation firm.

Roger H. Mason has been appointed manager of the new division which will develop, design and manufacture transistorized inverters and converters and special purpose filters. Mason was formerly assistant general manager of Hermetic Seal Transformer Co., Garland, Tex., and will make his home in Denver with his wife and five children.

The Denver firm was founded in 1939 by Claud Hathaway, Denver engineer and inventor, and later became a division of Hamilton Watch Co. The newly named company was formed this month with Donald J. Jones as President. Jones was a Hamilton vice president and manager of the Denver division since 1957.

The Hathaway company has specialized in designing and manufacturing recording and control instrumentation for aircraft, missile and electronic industries during the past five years. Transistorized frequency reference standards for use in the Thor Inertial Guidance System and constant speed jet engine drives are currently being developed and manufactured at Hathaway's \$1 million plant, 5800 E. Jewell Ave., opened in June, 1957.

The Denver Decibel visits the Electrical Engineering Department of the University of Colorado. Dr. J. C. Twombley, Dr. Frank Barnes, and Dr. C. T. A. Johnk describe the current research activity in the Department.

RESEARCH AT CU

PROPERTIES OF HIGH-CHARGE-DENSITY ELECTRON BEAMS

A research project directed by Dr. J. C. Twombly and sponsored by the Office of Naval Research is currently devoted to a study of some properties of highcharge-density electron beams. A drifting beam of charged particles—that is, a beam in which no longitudinal electric fields exist—has a transverse potential profile with a depressed center due to the negative space-charge present. An increase in injected current density deepens this depression which, in turn, lowers electron velocities and thus increases charge density and potential depression still more. At certain critical values this process becomes cumulative and results in an abrupt shift of energy level in the beam.

The initial objective of this analytical and experimental exploration is the determining of the speed of the energy-level transient and its propagation along the beam. Already the instability threshold and the succeeding stable state have been calculated for each of the more important beam geometries. Noise properties of the beam in both states have also been examined.

It is expected that as the basic mechanics of this beam behavior are further mastered, possible applications will become increasingly evident. Already being considered as applications are high-speed electronic switching, particle acceleration accompanying the transient's propagation, and the production of oscillation whose frequency could be governed by beam length.

THE DENVER DECIBEL

Several new research programs are currently getting underway in the Electrical Engineering Department under the direction of Dr. Frank Barnes.

BEAM-TYPE MASERS

The largest of these is a program for the development of a beam-type maser using hydrogen cyanide at a wavelength of 3.5 mm. Previous work with beam-type masers using ammonia at wavelengths of about 1.25 cm has provided a microwave signal source which is useful as a frequency standard.

Work has already started on the microwave interferometer which will be used as a resonant structure for the maser. This work is being supported by a grant from the University Council on Creative Activity and Research and the Electrical Engineering Department. It is planned that a millimeter wave maser will be in operation before the end of the coming summer. It is hoped that the development of this maser with a shorted wavelength will provide an even better frequency standard as well as an understanding of the techniques required in working with wavelengths of a few tenths of a millimeter.

TUNNEL DIODES

A second project which is just commencing is the study of tunnel diode circuit properties. This project will include an investigation of the temperature stability of tunnel diode parameters as well as the possible use of the diodes in the development of stable oscillator circuits. So many potential uses exist for tunnel diodes that the scope of this project cannot yet be anticipated.

NEW PROJECTS

Other projects which are receiving some attention include the possibilities of developing a large very *non*-linear capacitor and of the generation of subharmonic frequencies with a variable reactance.

STUDIES OF VERTICAL MONOPOLE ANTENNAS

A research group directed by Dr. C. T. A. Johnk and sponsored by the Air Force Cambridge Research Center is currently engaged in *Impedance and Pattern Studies of Vertical Monopole Antennas*.

For the study, the antennas are placed above finite conducting ground disks which are in turn set flush with a poorly conducting flat earth. By using microwave frequency signals, the system has been scaled down such that a flat earth region over a hundred wavelengths square could be built right in the laboratory. The lossy earth is being simulated by a tank of ordinary tap water which, at microwave frequencies, is a moderately poor electrical conductor. The monopole antenna is fed by means of a coaxial line from underneath the tank. A small flat brass disk placed at the water surface acts as an extension of the outer conductor of the coaxial line, while the monopole antenna is simply an extension of the inner conductor. Antenna impedance and pattern tests are being made for various disk diameters and monopole lengths in an effort to justify an approximate field theory.

As an outgrowth of this study, a new precision technique for slotted-line impedance measurements at X-band was devised by R. J. King of the University of Colorado. This technique is an outgrowth of earlier work done by Dr. R. Mittra of the University of Illinois. Enlarged Smith charts of four times normal size had to be used to plot the impedance date for the monopole system. Accuracies of better than ½ percent are being obtained.

Future studies will concentrate on variations of this technique using, for example, a radial-wire ground system in place of the solid brass disks. Studies will also be focused on the wave phenomena associated with sudden discontinuities in the constants of an earth wave-propagating system.

Illuminated canopy.

Type 9800 series input couplers provide all input, control and balance functions.

Type 481 Preamplifier provides sensitivities from one microvolt to 5 volts per mm.

Type 482 power amplifiers—may be used without preamplifiers for up to 10 mv/cm sensitivity.

Zero suppression control.

504-A paper drive—speeds from 1 to 250 mm/sec. Electrical speed shift 1 to 250 mm per minute available. Zero weave high precision drive, 850 ft. capacity (heat or electric) 1500 ft. (ink). Front loading, with full unobstructed record visible from front.

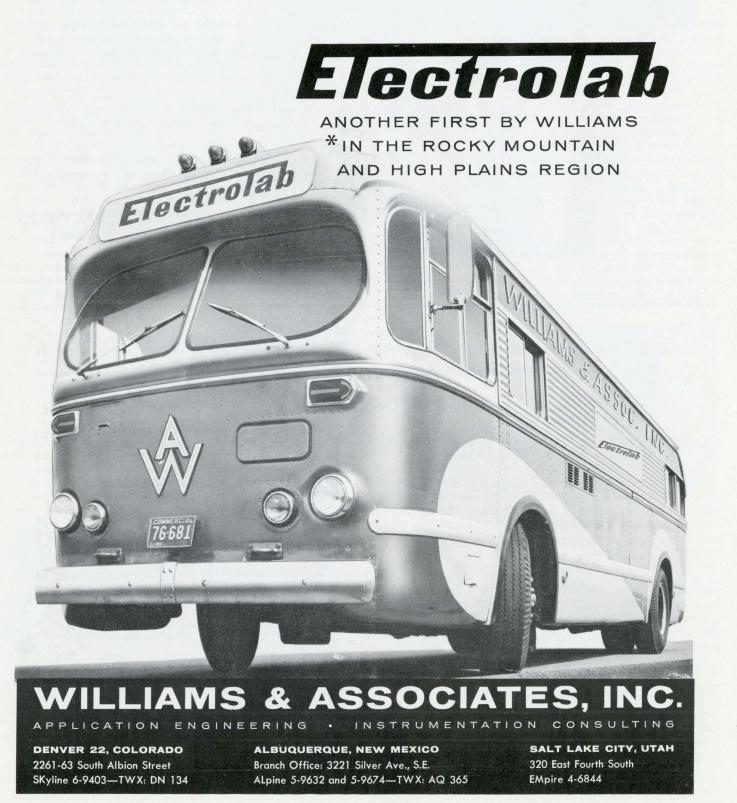

OTHER MODELS AVAILABLE

1 to 19 channels, console, rack, and portable assemblies.

We're not selling busses. We are completely refitting our spacious 35 ft. Electrolab. That's our word for the Williams traveling electronic laboratory—a convenient cruiser well stocked with the latest and best of instrumentation and components. Not only that, You've never seen such complete working exhibits as we're planning. In air-conditioned comfort, you'll see hooked-up systems, cutaways, working models to show you short cuts to simplify your engineering problems. Ample display racks hold detailed literature and spec sheets you can take with you. In short, the Electrolab has everything—including a small kitchen sink. Sure, this will all take time. But we at Williams wager it's worth the wait. You'll think so, too, when you see it. Electrolab—coming to your city soon.

PGAP NEWS

By Wm. Coombs

CHAIRMAN PGAP

A new policy of the National Bureau of Standards—to solicit outside papers for the NBS Journal of Research—is clearly in evidence in the January issue of the section on Radio Propagation. Of the thirteen papers in this issue nine are from authors outside of NBS-including one each from England, Japan, and Canada.

This section of the Journal, edited by Dr. James R. Wait of the NBS Boulder Laboratories, was particularly designed to serve as a national publication and has included outside authors in every issue since its first appearance in July 1959.

"Prior to this," according to Dr. Wait, "no single journal was primarily devoted to reporting research in radio propagation. To meet the growing interest in this field, the Journal on Radio Propation (one of four new sections of the Journal of Research) supplements the work of NBS by reporting outstanding papers in radio propagation from research workers in other laboratories. This policy has been developed after consultation with officers of the Institute of Radio Engineers and PGAP."

Subject matter of the January issue ranges from the effect of high-altitude nuclear explosions on radio noise to the refinement of a mathematical model used in studying the propagation of radio energy around a spherical earth.

Full title of the bi-monthly technical journal is Journal of Research of the National Bureau of Standards, Section D, Radio Propagation. It is available through subscription only (\$4.00 per year) which may be placed through the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D. C.

MARCH 21-24 SET FOR IRE MEETING

March 21 through 24 have been selected as the dates for the 1960 IRE International Convention, which will again be held at the Waldorf-Astoria Hotel and New York Coliseum in New York City. More than 60,000 engineers and scientists from 40 countries are expected to attend what has become the world's largest technical meeting and exhibition.

A comprehensive program of 275 papers, covering the most recent developments in the fields of all 28 IRE Professional Groups, will be presented in 54 sessions at the Waldorf-Astoria and the Coliseum. The high point of the program will be a special symposium on "Electronics - Out of This World" to be held Tuesday evening, March 22. The symposium will be conducted by Ernst Weber. President of the IRE for 1959, and a panel of leading space electronics experts. The complete program will be announced in

The Radio Engineering Show, filling all four floors of the Coliseum, will accomodate approximately 850 exhibitors. Some \$15,000,000 worth of the latest electronic equipment will be on display, most of it for the first time.

Inexpedient-Not calculated to advance one's interests.

IRE International Convention

The Institute of Radio Engineers has announced a change in the title of its annual convention from IRE National Convention to the IRE International Convention. The change reflects the fact that the IRE now has 22 Sections and 6,000 members outside the United States.

March 21 through 24 have been selected as the dates for the 1960 IRE International Convention, which will again be held at the Waldorf-Astoria Hotel and New York Coliseum in New York City. More than 60,000 engineers and scientists from 40 countries are expected to attend what has become the world's largest technical meeting and exhibition.

A comprehensive program of 275 papers, covering the most recent developments in the fields of all 28 IRE Professional Groups, will be presented in 54 sessions at the Waldorf-Astoria and the Coliseum. The high point of the program will be a special symposium on "Electronics—Out of This World" to be held Tuesday evening, March 22. The symposium will be conducted by Ernst Weber, President of the IRE for 1959, and a panel of leading space electronics experts.

The Radio Engineering Show, filling all four floors of the Coliseum, will accommodate approximately 850 exhibitors. Some \$15,000,000 worth of the latest electronic equipment will be on display, most of it for the first time.

The convention will get under way with the Annual Meeting of the IRE on Monday morning, March 21. Dr. Lloyd V. Berkner, President of Associated Universities, Inc., will be the featured speaker.

The social events will include a "get-together" cocktail party Monday evening and the annual IRE banquet Wednesday evening, both in the Grand Ballroom of the Waldorf. The banquet will feature the presentation of IRE Awards for 1960, including the Medal of Honor to Harry B. Nyquist, former Bell Telephone Laboratories engineer, and the Founders Award to Haraden Pratt, Secretary of the IRE.

INSTITUTE OF RADIO ENGINEERS **ELECTS OFFICERS FOR 1960**

Dr. McFarlan succeeds Ernst Weber, president of the Polytechnic Institute of Brooklyn, as head of the international society of 76,000 electronics engineers and scientists.

In recognition of the rapid growth of the institute's activities, both here and abroad, the IRE will for the first time in its history have two vice presidents in 1960, one residing in North America and the other from abroad. The vice

president representing overseas countries for 1960 will be J. A. Ratcliffe, head of radio research at the Cavendish Laboratory in Cambridge, England. The vice president representing North America will be J. N. Dyer, vice president of the Research and Engineering Division of Airborne Instruments Lab., Melville, N.Y. Dyer and Ratcliffe will succeed Donald B. Sinclair, vice president and chief engineer of General Radio Co., West Concord, Mass.

Elected as directors for the 1960-1962 term are W. G. Shepherd, head of the Department of Electrical Engineering, University of Minnesota, Minneapolis, Minn. and George Sinclair, Professor of Electrical Engineering, University of Toronto, Toronto, Canada.

Regional Directors elected for 1960-

1961 are as follows: Region 1-J. B. Russell, Jr., manager, Electronics Lab., General Electric Co., Syracuse, N. Y.; Region 3-B. J. Dasher, director, School of Electrical Engineering, Georgia Institute of Technology, Atlanta, Ga.; Region 5-R. E. Moe, manager of engineering, Receiving Tubes Dept., General Electric Co., Owensboro, Ky.; Region 7-C. W. Carnahan, technical assistant to the president, Varian Associates, Palo Alto, Calif.

MEMBER

Dick Hyde, Jr

RONALD L. McFARLAN was born on March 8, 1905, in Cincinnati, Ohio. He attended the University of Cincinnati and subsequently the University of Chicago, from which latter institution he received the Ph.D. in physics in 1930. His next two years were spent as a National Research Council Fellow in physics at Harvard University, and were followed by three more years as an instructor at Harvard.

Dr. McFarlan's industrial career has included positions as chief physicist of the United Drug Company, and later the B. B. Chemical Company, and also as director of research for the Bulova Watch Company. For about eight years he was executive assistant to the director of equipment engineering, Raytheon Manufacturing Company, and is presently a consultant to the DATAmatic Corporation and the Raytheon Manufacturing Company.

Dr. McFarlan's early professional work was in the fields of X-ray diffraction and scattering, ultraviolet spectroscopy, and electronic instrument design and navigation. He has been associated with the management of projects including electronic digital computers, radar, automatic guidance and control, microwave communication, sonar echo ranging, and depth sounding equipment. He is the holder of several patents, and the author of a number of articles in the electronic and optical fields.

Dr. McFarlan is a member of Sigma Xi, the American Physical Society, the American Chemical Society, the Institute of the Aeronautical Sciences, and the American Society of Naval Engineers. He has been Vice-Chairman and Chairman of the Boston Chapter of the Professional Group on Engineering Management, Chairman of the Boston Section, and a Senior Member of the IRE since 1951.

THE DENVER DECIBEL

YOU OUGHT TO JOIN THE IRE

BECAUSE: You will receive PROCEEDINGS OF THE IRE every month, the magazine recognized as one of the most important contributions to the engineering progress of electronics. The publication of the advances in engineering fundamentals and applied art constitute its best-known and most firmly established function. It is world-recognized as the publication organ of those advances.

BECAUSE: As a member of the IRE, you are eligible to join one or more IRE PROFESSIONAL GROUPS formed in 23 technical fields. Group membership provides an opportunity to broaden knowledge in your specialty field by association with other engineers with the same specialized interest. You will receive their technical publications, TRANSAC-TIONS, containing specialized articles in your particular field of interest.

BECAUSE: As an IRE member, you may serve on COMMITTEES, learn what others are doing, and contribute your own knowledge. The Standardization work of these committees has formed the basis for a number of important legal and governmental actions concerning the rating and measuring of radio

BECAUSE: As a member of a local IRE SECTION. you may attend, and participate in, meetings where matters of particular technical interest in your locality are discussed by people who know them best.

BECAUSE: With your IRE membership comes professional PRESTIGE. IRE membership, particularly in the higher grades, is universally recognized as a recommendation of professional attainment.

BECAUSE: As an IRE member, you will receive a copy of the ANNUAL IRE DIRECTORY, containing names and addresses of over 40,000 members, together with a listing of 3,500 firms in the field and the products they make.

Section Meeting

March 17, "Magnetic Materials at Radio and Microwave Frequencies" by Robert D. Harrington, 8:00 P.M., Boulder Laboratories Auditorium, Boulder. Colorado. Refreshments and opportunity to see the Boulder Laboratories work on radio materials.

April 28, Tour of U. S. Air Force Academy (Details to be arranged) and Student night papers.

1960 CONFERENCE ON **ELECTRONIC STANDARDS** AND MEASUREMENTS

The second national Conference on Electronic Standards and Measurements, co-sponsored by the National Bureau of Standards, The Institute of Radio Engineers' Professional Groups on Instrumentation and Microwave Theory and Techniques, and the American Institute of Electrical Engineers, will be held June 22-24, 1960, at the National Bureau of Standards Laboratories, Boulder, Colo-

Since the first meeting in 1958, there has been an intensified interest in the development of standard and measurement techniques, stemming in the main from defense requirements and the specialized needs of the space age. Many new laboratories have come into existence as a part of standards and calibrations programs within industry and among defense agencies. The upsurge in the need for greater accuracy and extended range, as well as wholly new measurement techniques, has multiplied the problems of those working in the field of electronic standards.

The 1960 Conference will provide a broad review of the most recent developments and accompanying problems which obtain throughout the useful spectrum of contemporary application.

Six sessions are planned on the following subjects-

- 1) Current and Future Problems in Electronic Standards: Traceability of calibrations to National Standards, anticipated requirements and overcoming adverse environments.
- 2) Direct-Current and Low-Frequency Standards and Calibrations: Current, voltage, power, resistance, impedance and attenuation.
- Methods of Measurement for Materials: Complex permittivity and permeability, tensor permeability and tensor conductivity.
- 4) Frequency and Time Standards: Molecular, atomic and quartz standards; measurement and utilization.
- 5) Microwave Standards and Calibrations: High and low power, phase shift, impedance, attenuation and noice.
- 6) High-Frequency Standards and Calibrations: Voltage, current, power, impedance, attenuation, phase shift and field strength.

PAPERS FOR WESCON

Authors wishing to present papers at the 1960 Western Electronic Show and Convention technical sessions to be held August 23-26 should register thier interest by May 1. Required are 100-200 word abstracts, together with complete texts or detailed summaries. They should be sent to the Chairman of the Technical Program, Richard G. Leitner, WESCON Business Office, 1435 South La Cienga Blvd., Los Angeles 35, Calif.

Selection of papers for the program will be made before June 1 and authors will be advised of acceptance or rejection by that date.

There will again be an IRE-WES-CON Convention Record published in advance of WESCON by the National Headquarters of the Institute of Radio Engineers.

76 Top Engineers Named IRE Fellows

Seventy-six leading radio engineers and scientists from the United States and other countries were named Fellows of the Institute of Radio Engineers by the Board of Directors at its November meeting held in New York City. The grade of Fellow is the highest membership grade offered by the IRE and is bestowed only by invitation on those who have made outstanding contributions to radio engineering or allied fields.

Presentation of the awards will be made by IRE Sections all over the world wherever the recipients reside. Recognition of the awards will be made by the President of the IRE at the annual banquet on March 23, 1960, at the Waldorf-Astoria in New York City during the 1960 IRE International Convention.

Heaven-A place where the wicked cease from troubling you with talk of their personal affairs, and the good listen with attention while you expound on your own.

DATES TO REMEMBER

1960 Date—Meeting—Place Sponsored by March 21-24 IRE International Convention, Coliseum & Wal-dorf, Astoria Hotel, New York City All PG's

IRE International Convenience, All PG's March 24-25
Ist Natl. Symp. on Human Factors in Electronics, Bell Tel. Labs. Aud., 463 West St., New York, N.Y. (En.rance at 55 Bethune St.)

April 3-8
6th Nuclear Congress, N. Y. Coliseum, New York City

April 12-13
14th Annual Spring Tech. Conf. on Electronic
Data Processing, Hotel Alms, Cincinnati, Ohio.
Cinn. Sec. ARS

Conf. on Automatic Techniques, Sheraton Cleve-land Hotel, Cleveland, Ohio PGIE:AIEE ASME

land Hotel, Cleveland, The Hotworks & Feedback 11-21 In natl. Symp. on Active Networks & Feedback Systems, Eng. Soc. Bldg., Auditorium, N.Y.C. PGCT:PIB:ONR:OSR:USASROI

il 20-22 SWIRECO S.W. IRE Reg. Conf. & Elec. Show & Natl. PG on Med.cal Electronics Conf., Sham-rock-Hilton Hotel, Houston, Texas Region 6 PGME
