

THE BRIDGE of H.K.N.

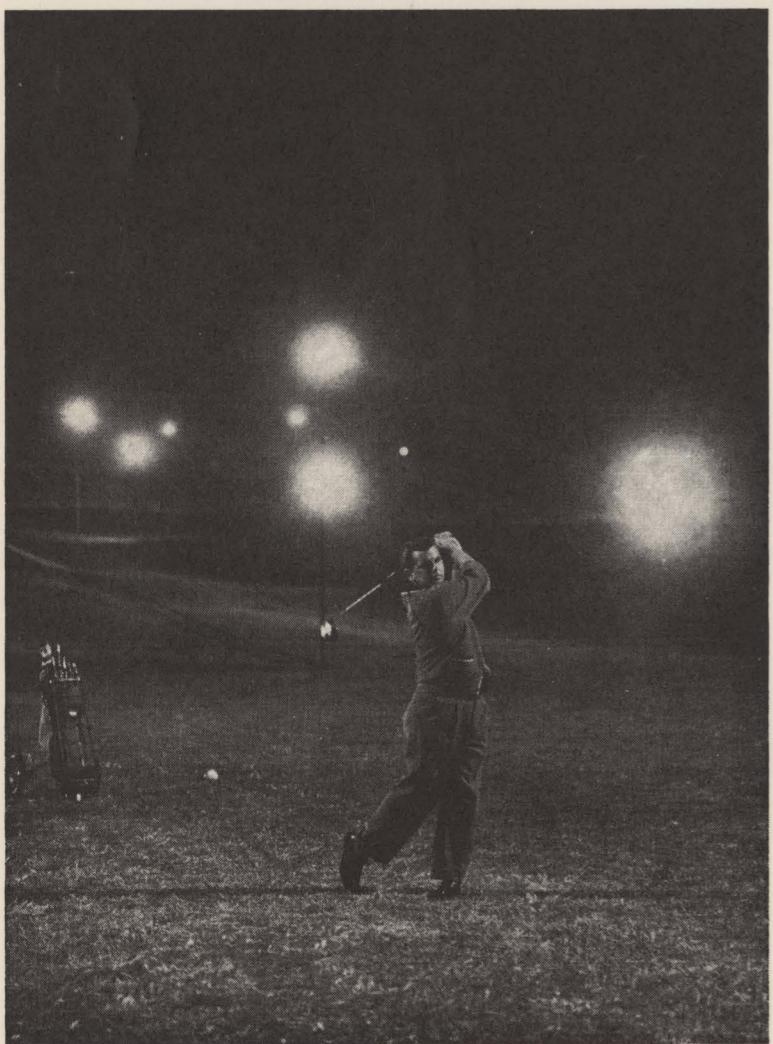

August '67

Special Issue

**General Electric
engineers and scientists
are satisfying the
needs of society . . .**

like longer days

Turning night into day with outdoor lighting is one of the many challenges you may face in your technical career at General Electric.

For example, inquisitive minds in research and advanced design at General Electric are evolving many concepts to make our recreation areas available day and night. Design engineers are developing concepts into specifications, while manufacturing engineers are developing the techniques and processes that translate designs into outdoor lighting systems.

In addition, technical marketing specialists are working with electric utilities and city planners, applying night-lighting to athletic stadiums, city parks, or outdoor pavilions.

You can help develop new products and concepts, new facilities, processes and manufacturing systems, or new applications and markets in your technical career with General Electric. For more information write: D. E. Irwin, Section 699-21, Schenectady, New York 12305.

GENERAL ELECTRIC

An Equal Opportunity Employer

Seventy-five percent of the surface of the earth is water and the percentage goes a lot higher than that when you are lost at sea in a small boat. Is it not surprising that very little is known about all that water? Our cover introduces *The Challenge Of Our Abundant Seas* as well as the special supplement *Adventures Of The Sea*.

SPECIAL NOTICE

As required by the Post Office, the BRIDGE mailing list is now set up numerically by Zip Codes which is not the same thing as alphabetically by states and cities. Therefore, when you send an address change to national headquarters you must send the old address and old Zip Code number as well as the new address and new Zip Code number.

The BRIDGE is published by the Eta Kappa Nu Association, an electrical engineering honor society. Eta Kappa Nu was founded at the University of Illinois, Urbana, October 28, 1904, that those in the profession of electrical engineering, who, by their attainments in college or in practice, have manifested a deep interest and marked ability in their chosen life work, may be brought into closer union so as to foster a spirit of liberal culture in the engineering colleges and to mark in an outstanding manner those who, as students in electrical engineering, have conferred honor on their Alma Maters by distinguished scholarship activities, leadership and exemplary character and to help these students progress by association with alumni who have attained prominence.

THE BRIDGE is published four times annually — November, February, May, August — and is published by Eta Kappa Nu, 1303 N. Harris, Champaign, Illinois. Second class postage paid at Champaign, Illinois. Copyright 1967, Eta Kappa Nu Association. Subscription price: three years, \$7.50. Life Subscription: \$25 and \$30.

Address editorial and subscription correspondence and changes of address to: BRIDGE of Eta Kappa Nu, P. O. Box 2203, Station A, Champaign, Illinois 61820.

The Conspiracy of **EZRA CORNELL** **AND SAMUEL F. B. MORSE** that Led to The Founding of Cornell University

ELLERY PAINE
Eminent Member

The most highly prized possession the boy had was a very small and very old axe that was given him by the man he called Grandpa Morse. He can not remember exactly when it was given him, but it was before he was six years old. The evidence to establish this fact is that the day his sister Olive was born his Grandmother Smith sent him to cut sassafras wood with his axe from which she extracted fluid supposed to be good for washing a baby's eyes.

The boy always enjoyed going with adults to spend a night at the Morse home. He never forgot his amazement to see Grandmother Morse put hot coals from the open fire into a covered container, and by use of its long wooden handle, move the container between the sheets of the bed in which he was to sleep that cold winter night. He had never before had such a warm bed to crawl into. The boy also was interested to watch the cooking of food over the open fire. There were no iron stoves in that house to be used for cooking food or warming rooms.

One Sunday morning the boy was amazed to see Grandpa Morse yoking his oxen in the barn yard. He asked if it was wicked to make oxen work on Sunday. The old man replied that he thought Sunday was a good day to draw stable manure into the field where potatoes were to be planted. The boy

watched the oxen being driven in the field and manure being dumped from the cart as people in horse-drawn wagons passed along the road on their way to church. After those people had passed from sight the oxen were brought to the barn and unyoked. When he had become older he learned that this kind old man apparently enjoyed doing unusual things which attracted attention.

On clear November mornings as the boy followed his line of traps over the pasture hill back of his home, in the distance to the south he could see another hill on which the house in which Jedidiah Morse was born. On those occasions the boy's thoughts were more on the hope he might find a skunk caught in one of his deadfalls than about Jedidiah of whom he heard the older members of his family speak. Jedidiah had graduated from Yale, and in 1789 produced the first books dealing with geography to be used in America.

He was interested to learn that Jedidiah's son Samuel was cousin of the old man who had given him the small axe. Then later he became interested in things electrical, he became deeply interested to learn that Samuel Morse had invented the telegraph, and was surprised that the telegraph had been invented by a man who had gained fame as a portrait painter.

As he rode the horse-drawn vehicle to visit the family of Uncle John Smith the boy knew when he had come to the Cornell farm before the house was in view. On that farm all stone walls stood straight and plumb instead of

the tumbled down condition of other farms. The wooden barways were all in perfect order and the weeds and bushes were cleared from the roadside.

Aunt Frances' older son was lured to the west in hopes of finding gold and a little later her younger son went to Kansas. The gold was not found but one of the two became owner of a large wheat farm in Washington and the other became a doctor and founded a hospital in a region that lacked medical facilities. Her unmarried daughter Anna Smith, was a teacher in Worcester living in an apartment with another teacher Sarah Averill.

At the age of 17 the boy passed the entrance examinations at Worcester Polytechnic Institute. A great depression had developed. The boy's father had little money but borrowed enough to cover tuition fees but not enough to cover the expense for room and board. Anna kindly invited the young man to live in her apartment and for him to pay years later. Had not Anna done this the study program could not have been carried out.

John Smith had died but Aunt Frances continued to live in the ancient Cornell house. During winters she was with daughter Anna. Aunt Frances was a great talker and her favorite

topic was her relatives, especially those of past times. She corresponded with Cornell relatives who lived afar away as California and Australia. As she talked the young man tried his best to listen in a polite manner but he was shocked on one occasion to have her stop talking, and after looking at him sharply for a moment to exclaim "Why Ellery, you do not seem at all interested to hear about your family relations."

Ezra Cornell made many visits with his Plainfield relatives when Aunt Frances was a young woman she remembered the stories he told about his activities which had brought him great wealth and fame. The young engineering student at Worcester soon became fascinated to hear his Aunt Frances tell about Morse and his association with Cornell in bringing the telegraph into the service of society. Never again did she have evidence that he did not show interest in what she said.

Ezra's father left Plainfield to live in Westchester County, New York where Ezra was born in 1807. According to modern standards Ezra had a meager education yet he did teach country school a term or two. He learned the trade of carpenter and worked in a machine shop for a year.

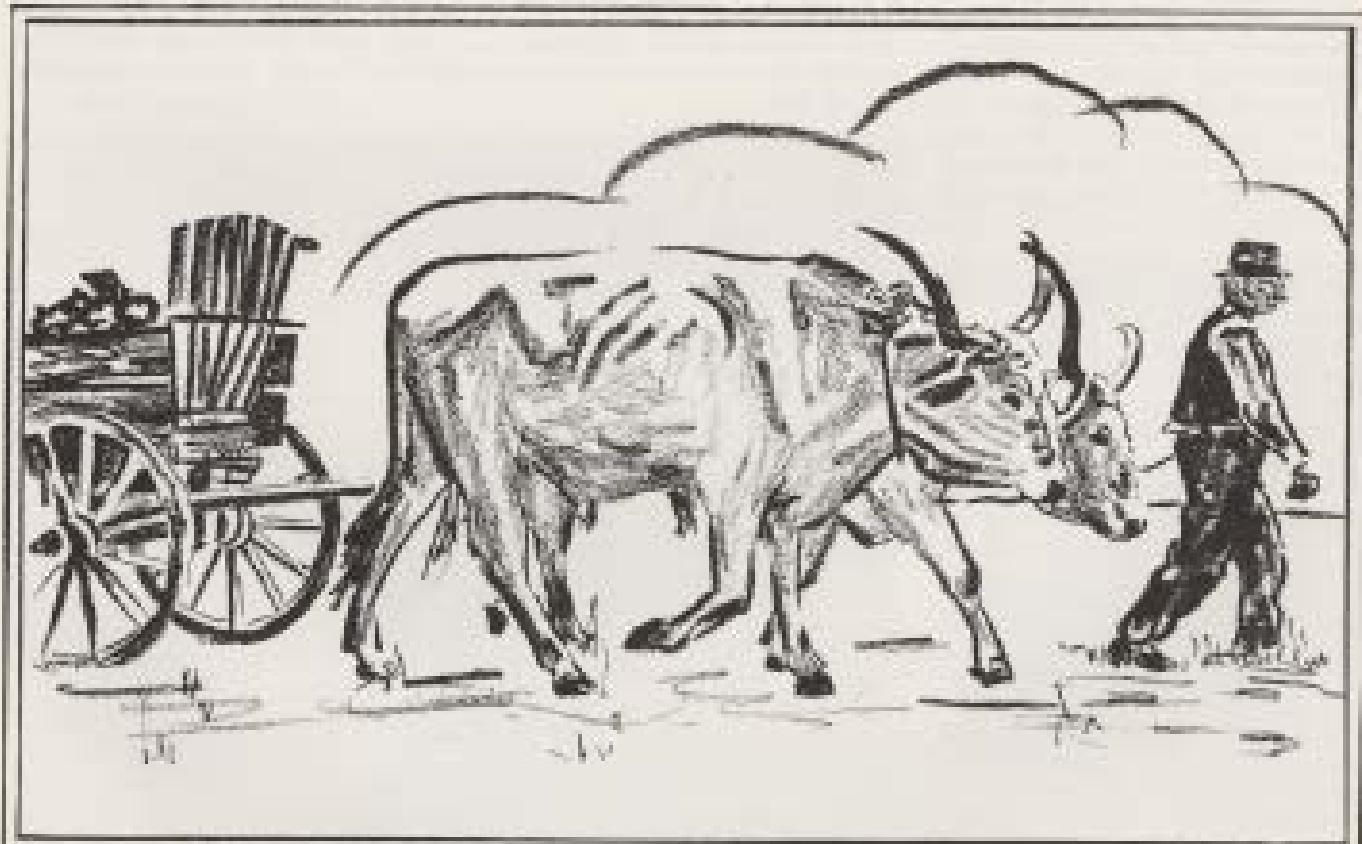

In 1826 Ezra moved to Ithaca where

he operated a mill for about eight years then joined his brother in farming and lumbering. He became interested in building plows and this brought him in contact with Samuel Morse who invented the telegraph in 1835 and in 1843 was granted \$20,000 by the Federal Government to build a telegraph line between Baltimore and Washington. Morse's plan was to bury an insulated conductor in the earth through which the electric signals were to pass. Ezra agreed to build a special plow to open the furrow in which the conductor was to be placed and to have charge of operating the plow and install the conductor.

According to the story Ezra told his relatives, it was the custom each night to send telegraph messages over the conductor which was buried. It was found that as the distance increased the signals became weaker, and finally failed completely. Morse was distraught and told Ezra "We are ruined."

Ezra replied that they were not yet ruined. He urged Morse not to announce the failure of signals to pass through the buried conductor, and to let him handle the matter the following day.

special BRIDGE series.

EXPLORING & MINING FROM THE SEA

The government budget for marine science and technology this year covers many applications. Included are national security, minerals, chemicals, water and energy resources, fishery development and seafood technology, recreation and health, and marine pollution abatement and control. By far the largest portion...is in anti-submarine warfare, but the balance of the budget for 1968 will run several hundred million dollars for Navy Man-In-The-Sea projects, such as Commander N. Scott Carpenter's Sea Lab, and for non-military aspects.

The government timetable runs as follows: by 1975, we expect to be able to rescue men down to depths of 20,000 feet. This includes rescuing men from Navy submarines down as far as they will go. By that time the more promising geological areas of the continental shelf will have been completely surveyed and mapped around the United States, and a manned-bottom laboratory at least to a depth of 1,000 feet will have been established.

Dr. Brunetti is Assistant to the President of FMC Corporation. He was named by EKN as the Outstanding Young Electrical Engineer in the United States in 1961. Editorial assistance by Kathleen Ryan.

A FIRESIDE CHAT with Cleo Brunetti

Construction of a nuclear power plant operating on the bottom will have been started.

Our Company has built a seagoing vessel for the Scripps Institution of Oceanography at La Jolla, California, called the FLIP. It is 355 feet long... At sea the vessel can be made to flip itself vertically. When it does, most of its 300 foot length goes underwater and five stories of laboratories remain above water. This provides a "stable platform" for scientists to conduct studies at sea. Even though it may encounter 35 foot waves, the vessel moves only a few inches up and down...

We are now working on a deep diving system (DDS) designed to carry workers from ship to a depth of a thousand feet. This system is to be used for salvage operations throughout the world. It consists of two main

units — a decompression chamber aboard ship and a diving capsule. Divers enter the water in the spherical diving capsule which takes them to the bottom and has an opening which allows them to go out and work on the ocean floor... They live in this system for something like three weeks, going up and down freely without danger of getting the bends, since the same pressure is maintained in all parts of the system, the decompression chamber, the diving capsule and the ocean bottom...

By 1975, we expect to have established manned-habitation at 6,000 feet, including underwater sea terminals. At that time we will be producing oil and gas from shelves below 1,000 feet and doing some preliminary mining of phosphorus and manganese nodules. Permanent ocean platforms,

(Continued on Page 10)

The FLIP (Floating Instrument Platform) ship rotates from its vertical working position, to its horizontal position. FLIP floats on the surface like a normal vessel. When it tips vertically, its narrow hull rests on the bottom of the sea. (Photo courtesy FMC Corporation)

Los Angeles Regional

by William Ringer

A regional visitation was held in Los Angeles on February 17, 1968. There were eighteen delegates from active chapters, two faculty advisers, and five members of the Los Angeles Alumni Chapter present.

Epsilon Nu	California State College of Los Angeles
Epsilon Upsilon	University of Southern California
Epsilon Beta	Arizona State University
Epsilon Iota	San Jose State College
Mu	University of California, Berkeley
Epsilon Theta	California State College of Long Beach

We profited by the reports from previous visitations which indicated that informality is necessary.

Mr. Alex Kendall, past president of Los Angeles Alumni Chapters and presently associated with TRW Systems Group, arranged a tour for the TRW Space Park. This is one of the outstanding research and development centers of the world. Having the tour first set the participants at ease for the discussions which followed.

After the tour, Mr. Andrew Mierke, Jr. of TRW Public Relations made a short and very interesting presentation. This was followed by a short statement by one delegate from each chapter. The problem areas mentioned in these statements were used as a base for discussions in the afternoon.

We then moved to the Pen and Quill restaurant for lunch as the guests of TRW.

A two hour discussion followed lunch, and it was tremendous. The delegates really exchanged ideas. These six chapters are all in relatively healthy condition but certainly not without problems.

LETTERS TO THE EDITOR

April 15, 1968

Dear Sir:

I received the May issue of *The Bridge* today. I especially enjoyed reading "Telescope Through the Ages" and the advertisement of Western Electric. I was the first to solicit advertising in *The Bridge*. I worked at Hughes Aircraft Co., in Culver City and they were first to have an ad in *The Bridge* of Eta Kappa Nu. I believe the cover on the current issue is great.

Las Vegas, Nevada

Epsilon Sigma Installed at UNIV. OF FLORIDA

On December 1, 1967, nineteen undergraduate students, fourteen graduate students, and six faculty members were initiated as charter members of the Epsilon Sigma Chapter of Eta Kappa Nu at the University of Florida. The ceremony took place in the Green Room at the Holiday Inn in Gainesville.

The initiation ceremony was conducted by John E. Farley, Vice-President of the national organization, and Dr. Charles E. Hutchinson, National Director for the Eastern region. They were assisted by Colonel Towns Kendall, Dr. Alan D. Sutherland, Dr. Arthur J. Breslau, Dr. Eugene R. Chenee, Dr. Donald G. Childers, Dr. Marion E. Fornari, all University of Florida faculty members and long-standing members of Eta Kappa Nu.

Following the initiation ceremonies, a banquet was held in the Continental Room at the Holiday Inn. Mr. Farley presented the Charter of Epsilon Sigma Chapter to the acting Dean of the College of Engineering, John A. Nattress. Among the guests at the banquet were Mrs. Nattress, Dr. and Mrs. Wayne Chen, Chairman of the Department of Electrical Engineering, Dr. and Mrs. Jack R. Smith, Epsilon Sigma's faculty advisor, Donald A. Grooms of the College of Journalism and Communications was guest speaker.

Vice President Jack Farley presents Epsilon Sigma's charter to Dean John A. Nattress.

ELECTION YEAR 1968

In the spirit of this important election year, BRIDGE is pleased to present the following article on the subject POLITICS OVER A CUP OF COFFEE, as well as the special eight page supplement (starting on opposite page) entitled THE FEDERAL CONSTITUTION.

From the local school board to the major national campaign — a candidate is handicapped if he hasn't made points and influenced votes over an informal coffee get-together. Ohio's Representative Donald E. Lukens(R), for example, estimates he attended more than 750 campaign coffees during his successful race for a seat in the 90th Congress.

But this brew is not new! Political history has always been laced with coffee. The coffeehouse was traditionally the place where the hottest issues of the day were stirred up. Forerunners of the political club — such

famous coffeehouses as Wilts, Buttons, the Green Dragon and Procope's — are ground into history itself.

The first coffeehouse was established in London in 1652. Within twenty years, coffeehouses had come to play so important a role in the social and political life of the day that Charles II attempted to repress them on the ground that they were "seminaries of sedition."

But history was being hatched over hot coffee and Charles II could not stop the flow. In spite of royal opposition, the free-thinking spirit of the English coffeehouse survived.

Colonial Coffee House

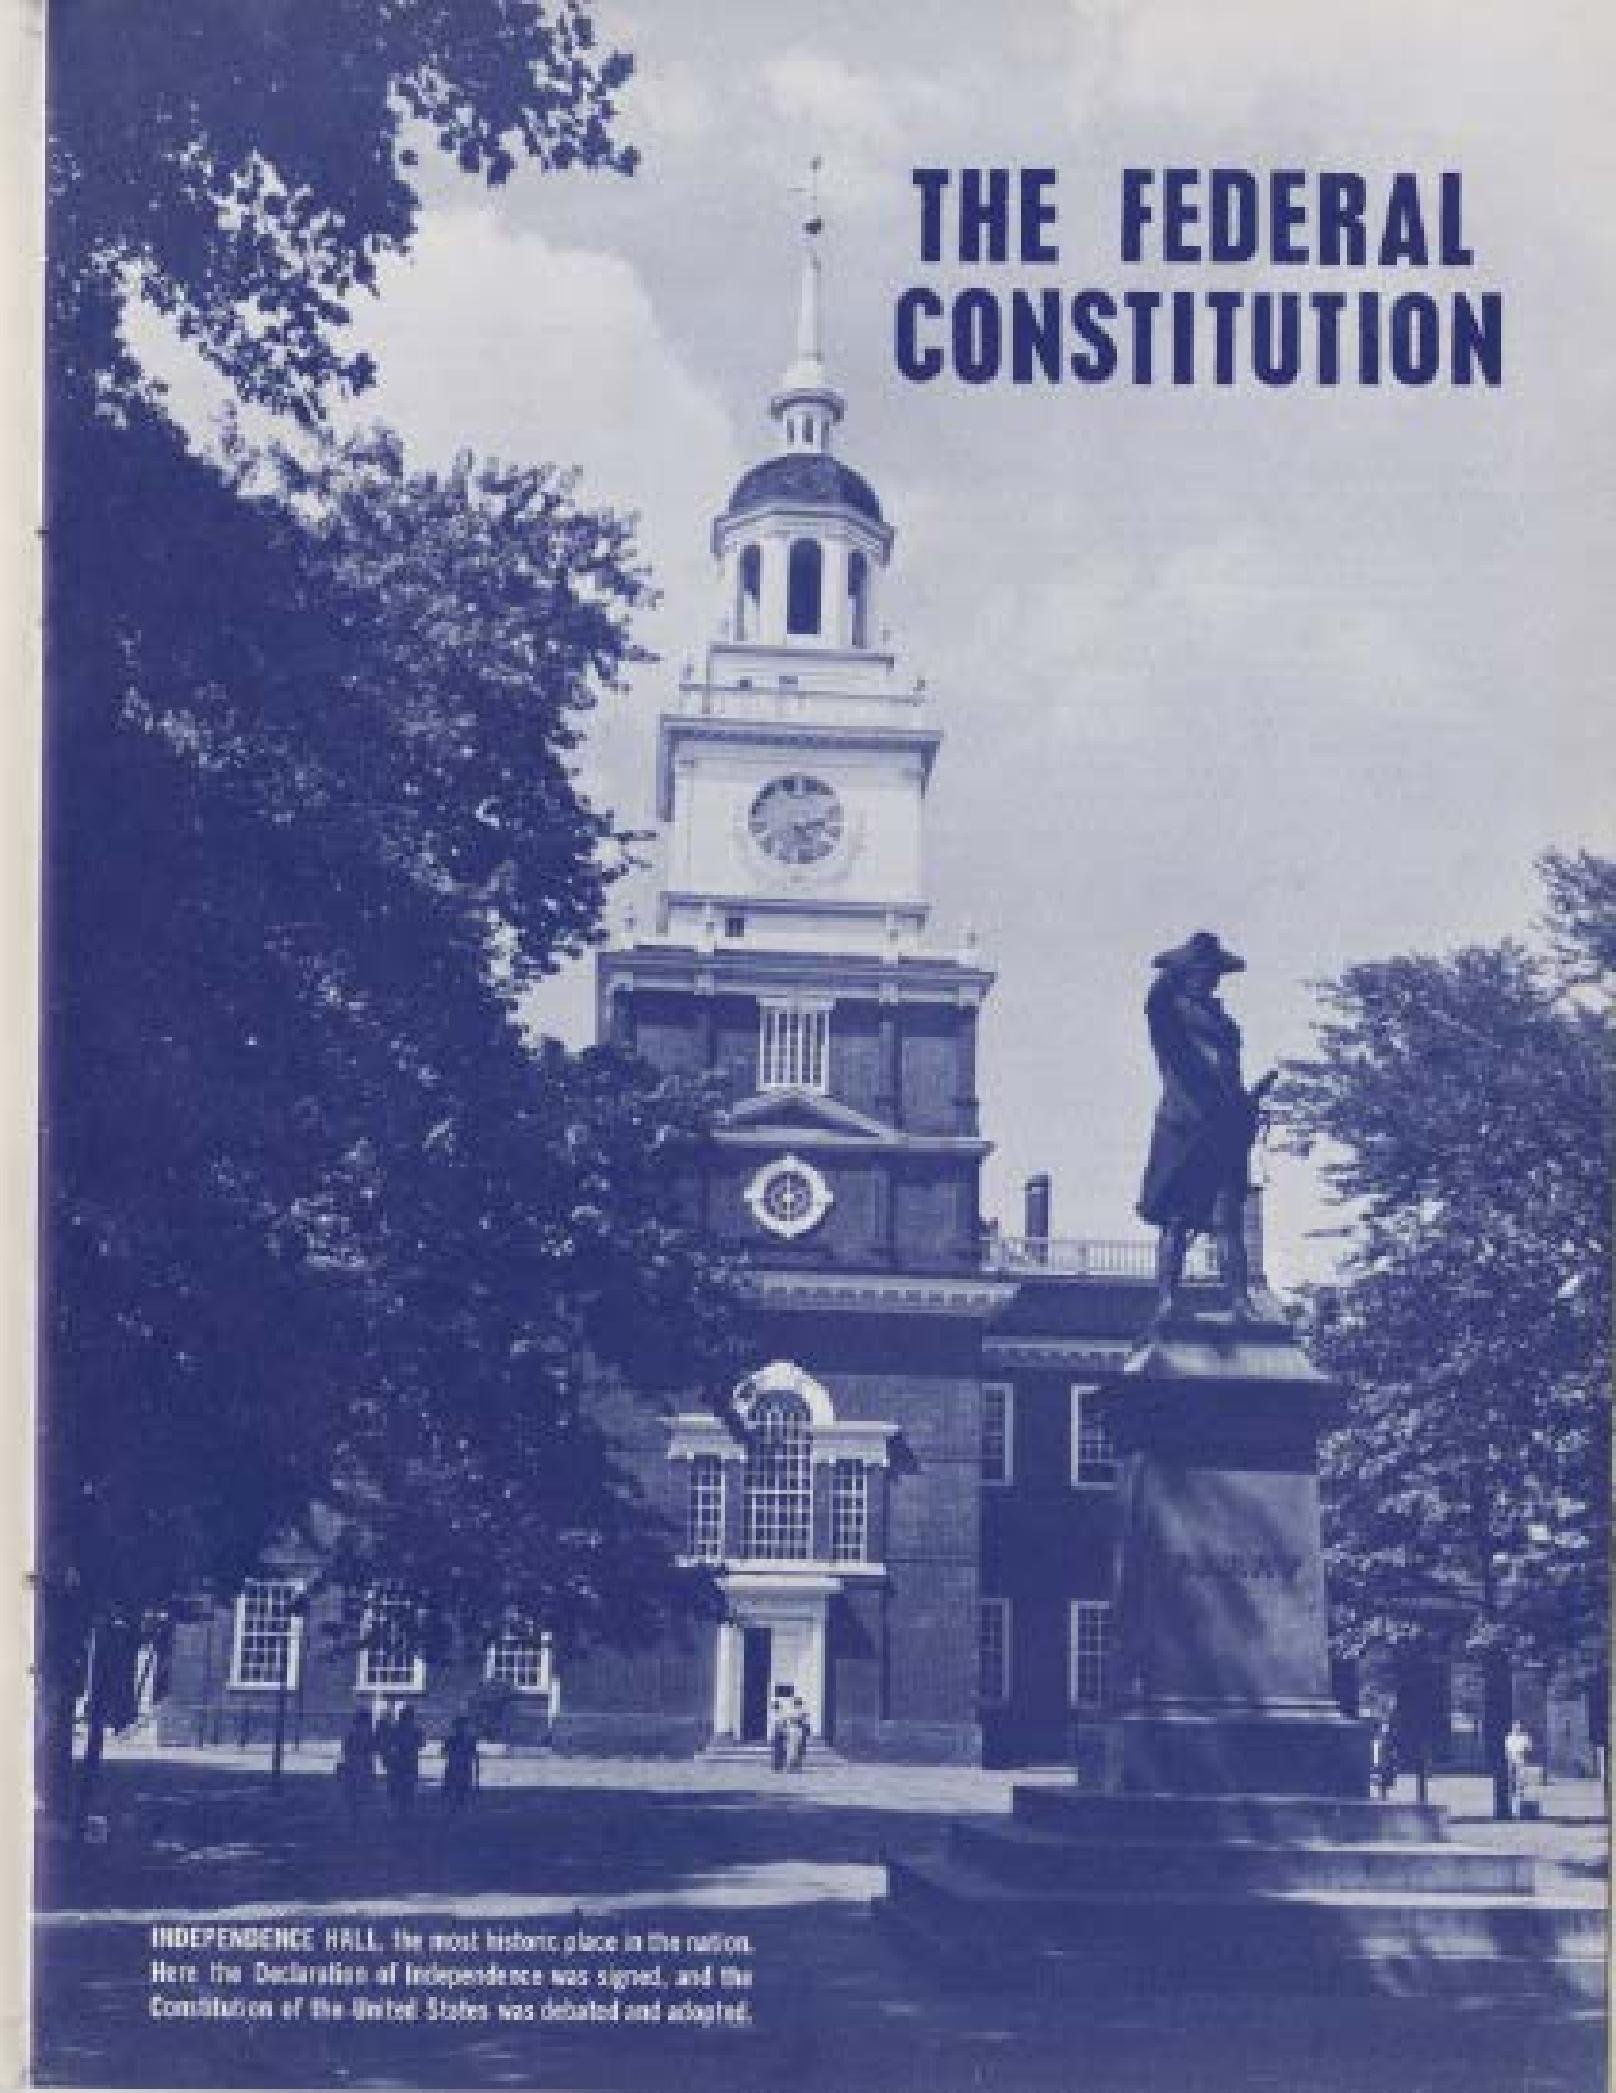

The French had a word for it — and how important a word it is shown by the fact that our common term for restaurant is *cafe*, the French word for coffee or coffeehouse. At Procope's in Paris, Robespierre, Marin and Danton plotted the fall of Louis XVI and Marie Antoinette — cakes didn't help her with those coffee drinkers either! But Procope's didn't lose its head — in 1790 it was still around, draped in black to mourn the passing of that friend of the Republic, Benjamin Franklin — and still later it played host to a poor artillery officer named Bonaparte who was forced to leave his tricorned hat at security for unpaid coffee bills!

The spirit of coffee and caucus was soon imported to the New World. Boston's Green Dragon was by far the most celebrated of the American coffeehouses — and Daniel Webster called it the headquarters of the Revolution; but the King's Arms near Trinity Church was also well known. Rooms on its second story were used for public trials and political meetings.

This historic-gastronomic combination is as politically potent today as it was when John Adams led a band out of the Green Dragon to dispose of a great deal of tea! With an estimated 40,000 elections held in the United States every year, the campaign coffee gathering is made to order for down-home politicking.

Among the more enthusiastic boosters of the campaign coffee is Sen. Howard H. Baker, Jr., who made especially effective use of the gatherings in his successful 1966 bid to become the first Republican ever elected to the Senate in the history of Tennessee. According to Senator Baker, coffee get-togethers give a candidate a chance to meet people not ordinarily involved in his campaign. He says the campaign coffee plays an important role in describing the "deadly serious business" of politics to voters.

THE FEDERAL CONSTITUTION

INDEPENDENCE HALL, the most historic place in the nation. Here the Declaration of Independence was signed, and the Constitution of the United States was debated and adopted.

The Constitution

We the People

We the People, do ordain and establish this Constitution for the United States of America.

Article I.

SECTION 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECTION 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Representatives and Direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of Free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons. The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, or such shorter time as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, nor less than One Hundred and Fifty three, unless there shall be more than Sixty thousand Inhabitants; and until such enumeration shall be made, the State of New Hampshire shall be entitled to elect three, Massachusetts eight, Rhode Island and Providence Plantations nine, Connecticut ten, New Jersey four, Pennsylvania eight, Delaware two, Maryland six, Virginia ten, North Carolina five, South Carolina four, and Georgia three.

Three fifths of all other Persons shall be included in the Enumeration, and shall be included in the Number of Representatives.

The House of Representatives shall chuse their Speaker and other Officers, and shall have the Power of Impeachment.

SECTION 3. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats in the Senate of the first Class shall be vacated at the expiration of the second Year, of the second Class at the expiration of the fourth Year, and of the third Class at the expiration of the sixth Year, so that one third may be elected every second Year; and if Vacancies happen by Resignation, or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.

No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside. And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgments in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of Honor, Trust or Profit under the United States; but the Party impeached shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

SECTION 4. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; and the Congress may at any time by Law make or alter such Regulations, except as to the Places of Chusing Senators.

The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

SECTION 5. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behavior, and with the Concurrence of two thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Votes and Proceedings of the Members of either House in their various Sittings, at the Desire of one fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three Days, nor to any other Place than that in which the two Houses shall be sitting.

SECTION 6. The Senators and Representatives shall receive a Compensation for their Services, to be determined by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Sessions of their respective Houses, and in going to and returning from the same; and in any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time, and no Person holding any Office under the United States, shall be a Senator or Representative during his Continuance in Office.

SECTION 7. No Bill of Attainder, or Veto to which the Concurrence of the Senate and House of Representatives are necessary for a law, except in the Cases of Adjournment, shall be passed in the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a law.

SECTION 8. The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defense and general Welfare of the United States, but all Duties, Imposts and Excises shall be uniform throughout the United States.

To borrow money on the credit of the United States.

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes.

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Immigration throughout the United States.

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weight and Measure.

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States.

To establish Post Offices and post Roads;

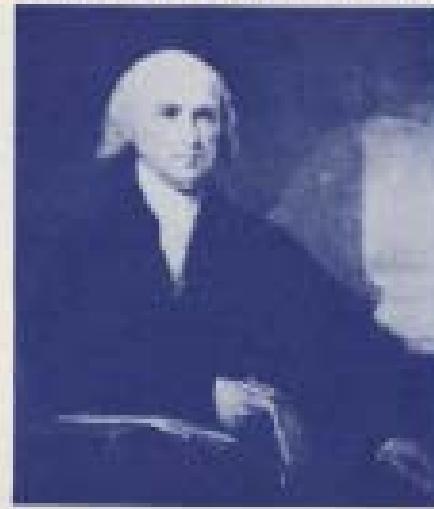

To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective

Writings and Discoveries;

TAXATION AND THE FEDERAL CONSTITUTION

JAMES MADISON

President of the United States

Give me leave to say something of the nature of the government, and to show that it is perfectly safe and just to vest it with the power of taxation. There are a number of opinions but the principal question is, whether it be a federal or a consolidated government. In order to judge properly of the question before us, we must consider it minutely, in its principal parts. I myself conceive that it is of a mixed nature; it is, in a manner, unprecedented. We cannot find one express prototype in the experience of the world; it stands by itself. In some respects, it is a government of a federal nature; in others, it is of a consolidated nature. Even if we attend to the manner in which the Constitution is investigated, ratified, and made the act of the people of America, I can say, notwithstanding what the honorable gentleman has alleged, that this government is not completely consolidated; nor is it entirely federal. Who are the parties to it? The people — not the people as composing one great body, but the people as composing thirteen sovereignties. Were it, as the gentleman asserts, a consolidated government, the agent of a majority of the people would be sufficient for its establishment, and as a majority have adopted it already, the remaining States would be bound by the act of the majority, even if they unanimously reprobated it. Were it such a government as is suggested, it would be now binding on the people of this State. Thus it is of complicated nature, and this complication, I trust, will be found to exclude the evils of absolute consolidation, as well as of a mere confederacy. If Virginia were separated from all the States, her power and authority would extend to all cases; in like manner, were all power vested in the general government, it would be a consolidated government; but the powers of the Federal government are enumerated, it can only operate in certain cases; it has legislative power on defined and limited objects, beyond which it cannot extend its jurisdiction.

But the honorable member has said, with peculiar acrimony, the power given to the general government by this Constitution, I conceive that the first question on this subject

is, whether these powers be necessary, if they be, we are reduced to the dilemma of either submitting to the inconvenience, or leaving the Union. Let us consider the most important of these reprobated powers; that of direct taxation is most generally objected to. With respect to the exigencies of government, there is no question but the most easy mode of providing for them will be adopted. When, therefore, direct taxes are not necessary, they will not be resorted to. It can be of little advantage to those in power to raise money in a manner oppressive to the people. To consult the conveniences of the people will cost them nothing, and in many respects will be advantageous to them. Direct taxes will only be resorted to for great purposes. What has brought on other nations those immense debts, under the pressure of which many of them labor? Not the expenses of their governments, but war. If this country should be engaged in war (and I conceive we ought to provide for the possibility of such a case), how would it be carried on? By the usual means provided from year to year? As our imports will be necessary for the expenses of government, and other common exigencies, how are we to carry on the means of defense? How is it possible a war could be supported without money or credit? And would it be possible for government to have credit, without having the power of raising money? No, it would be impossible for any government, in such a case, to defend itself. Then, I say, sir, that it is necessary to establish funds for extraordinary exigencies, and give this power to the general government, for the utter inability of previous requisitions on the States to too well known. Would it be possible for those countries, whose finances and revenues are carried to the highest perfection, to carry on the operations of government on great emergencies, such as the resistance of a war, without an uncontrolled power of raising money? Has it not been necessary for Great Britain, notwithstanding the facility of the collection of her taxes, to have recourse very often to this and other extraordinary methods of procuring money?

To exercise exclusive Jurisdiction over the District of Columbia.
To declare and punish Piracies and felonies committed on the high Seas, and Offenses against the Law of Nations.
To declare War; grant Letters of Marque and Reprisal; and make Rules concerning Captures on Land and Water.
To raise and support Armies; but no Appropriation of Money to that Use shall be for longer Term than two Years.
To provide and maintain a Navy.

To make Rules for the Government and Regulation of the land and naval Forces.

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions.

To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be employed in the Service of the United

States, according to the Appointments of the Officers, and the Authority of Training the Militia according to the discipline prescribed by Congress.

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Consent of the several States, and the Approbation of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent

of the Legislature of the State in which the same shall be, for the erection of Ports, Buildings, arsenals, dock-Yards, and other needful Buildings; — And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution

in the Government of the United States, or in any Department or Officer thereof.

SECTION 8. The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, and exceeding one dollar for each Person.

The Privilege of the Writ of Habeas Corpus shall not be denied, except when in Cases of Resistance or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

No Capitation, or other Direct Tax, shall be laid by Congress on the States or Territories before the same is apportioned among them.

No Tax or Duty shall be laid on Articles imported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another; nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but on Account of Appropriations made by Law, and a regular Statement and Account of the Receipts and Expenditure of all public Money, shall be published from time to time.

No Title of Nobility shall be granted by the United States; and no Person holding any Office of Trust or Profit under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

SECTION 9. No State shall emit Bills of Credit; Admit into their Confederation, any Slave; issue Bills of Credit; make any Thing but gold and silver Coin a Tender or Payment of Debts; pass any Bill of Attainder, or law retrospective, or laws impeding the Obligation of Contracts, excepting any Title of Nobility.

No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for securing the Revenue therefrom; and the net Proceeds of all Duties and Imposts, laid by any State on Imports or Exports, shall be paid into the Treasury of the United States; and all such Laws shall be subject to the Revision and Control of the Congress.

No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, except under an Agreement or Compact with another State, or with a Foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

Article II.

SECTION 1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice-President, chosen for the same Term, be elected, at Polls.

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

[The Electors shall meet in their respective States, and vote by Ballot for two persons, of whom one at least shall not be an Inhabitant of the same State where themselves and they shall make a List of all the Persons chosen for, and of the Number of Votes for each which shall sign and affix, and transmittal joint to the Seat of the Government of the United States, directed to the President of the Senate, in the Presence of the Senate and House of Representatives; upon all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, of such Number or a Majority of the whole Number of Electors apportioned and chosen for this State, and if there be more than one who have such Majority, and less than a Majority of Votes, then the House of Representatives shall immediately choose by Ballot one of them for the President, and if no Person have a Majority, then from the余数 of the List the said House shall on the second Ballot choose the President, but including the President, the Votes shall be taken by State, the Votes from each State having one Voice. A quorum shall consist of a Member or Members from three-fourths of the States, and a Majority of all the States, shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Abreast shall be the Vice-President. But if there should remain two or more who have equal Votes, the House shall then choose him by Ballot for Vice-President.]

The Congress may determine the Time of choosing the Electors, and the Day on which they shall give their Votes, which Day shall be the same throughout the United States.

No person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty-five Years, and been fourteen Years a Resident within the United States.

In Case of the Removal of the President from Office, or of his Death, Resignation, or inability to discharge the Powers and Duties of the said Office, the same shall devolve on the Vice-President, and the Congress shall by Law provide for the Case of Removal, Death, Resignation or inability, both of the President and Vice-President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive either that Period nor after Election from the United States, or any other.

Before he enters on the Execution of his Office, he shall take an Oath or Affirmation — "I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

SECTION 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinions in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to Grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two-thirds of the Senators present consent; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointments of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Session of the Senate, by granting Commissions which shall expire at the End of their next Session.

SECTION 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; for this, annual Sessions, shall be held on such Times as he shall think proper, or shall receive Assent and Approbation of both Houses of the Congress.

He shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

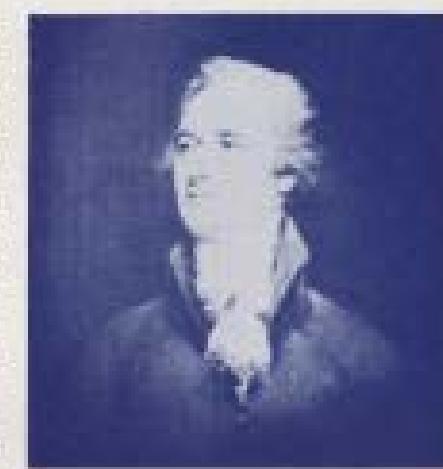

SECTION 4. The President, Vice-President and all the Officers of the United States, shall be removed (as often as Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

Article III.

SECTION 1. The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time order and establish. The judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services a Compensation which shall not be diminished during their Continuance in Office.

THE STATES AND THE FEDERAL CONSTITUTION

ALEXANDER HAMILTON
Secretary of the Treasury

Gentlemen indulge too many unreasonable apprehensions of danger to the state governments; they seem to suppose that the moment you put them into a national council they become corrupt and tyrannical, and lose all their affection for their fellow-citizens. But can we imagine that the senators will ever be so insensible of their own advantage as to sacrifice the genuine interest of their constituents? The state governments are essentially necessary to the form and spirit of the general system. As long, therefore, as Congress has a full conviction of this necessity, they must, even upon principles purely national, have as firm an attachment to the one as to the other. This conviction can never leave them, unless they become madmen. While the Constitution continues to be real and its principles known, the states must, by every rational man, be considered as coequal, coextensive parts of the Union, and therefore the idea of sacrificing the former to the latter is wholly inadmissible.

From the circumstances already explained, and many others which might be mentioned, results a complicated, irresistible check, which must ever support the existence and importance of the state governments. The danger, if any exists, flows from an opposite source. The probable evil is, that the general government will be too dependent on the state legislatures, too much governed by their prejudices, and too obsequious to their humors; that the states, with every power in their hands, will make encroachments on the national authority, till the Union is weakened and dissolved.

There are certain social principles in human nature from which we may draw the most solid conclusions with respect to the conduct of individuals and of communities. We love our families more than our neighbors; we love our neighbors more than our countrymen in general. The human affections, like the solar heat, lose their intensity as they depart from

state governments, though we have no means of resisting them; but we cannot confide in the national government, though we have an effectual constitutional guard against every encroachment. This is the essence of their argument, and it is false and fallacious beyond exception.

With regard to the jurisdiction of the two governments, I shall certainly admit that the Constitution ought to be so formed as not to prevent the states from providing for their own existence, and I maintain that it is so formed, and that their power of providing for themselves is sufficiently established. This is conceded by one gentleman, and in the next breath the concession is retracted. He says Congress has but one exclusive right in taxation — that of duties on imports; certainly then, their other powers are only concurrent. But in take off the force of this obvious conclusion he immediately says that the laws of the United States are supreme; and that where there is one supreme there cannot be a concurrent authority; and further, that where the laws of the Union are supreme, those of the states must be subordinate; because there cannot be two supremes. This is evident sophistry. That two supreme powers cannot act together is false. They are inconsistent only when they are aimed at each other or at one indivisible object. The laws of the United States are supreme as to all their proper, constitutional objects; the laws of the states are supreme in the same way. These supreme laws may act on different objects without clashing; or they may operate on different parts of the same common object with perfect harmony. Suppose both governments should lay a tax of a penny on a certain article; has not each an independent and uncontrollable power to collect its own tax? The meaning of the maxim, there cannot be two supremes, is simply this — two powers cannot be supreme over each other. This meaning is entirely perverted by the gentleman.

What is more important that the administration of justice and the execution of the civil and criminal laws? Can the state governments become insignificant while they have the power of raising money independently and without control? If they are really useful, if they are calculated to promote the essential interests of the people, they must have their confidence and support. The states can never lose their powers till the whole people of America are robbed of their liberties. These must go together; they must support each other, or meet one common fate. On the gentleman's principle, we may safely trust the

ARTICLE 2. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority; — in all Cases affecting Ambassadors, other public Ministers and Consuls; —to Cases of admiralty and maritime Jurisdiction; — to Controversies to which the United States shall be a Party; — to Controversies between two or more States; —between a State and Citizens of another State; —between Citizens of different States; —between Citizens of the same State claiming Lands under Grants of different States, and his Taxes or Fines, or the Criminal Clerks, and plebeian States, Citizens or Subjects.

In all Cases affecting Ambassadors, other Public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction; in all other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The rest of all Causes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed, but also not separated within any State, the Trial shall be in such Place or Places as the Congress may by Law direct.

SECTION I. Treason against the United States, and reward and recompence for aiding the enemies of the United States.

The Congress shall have power to declare the Existence of Treason, but no Attainder of Treason shall exist longer than a Year, or Pending except during the Life of the Person attainted.

Digitized by srujanika@gmail.com

Mittheilung.

SECTION 2. Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws provide for the Uniformity in the Laws which shall be passed, and the Judicial Decrees,

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall be delivered up according to the provisions of the Constitution.

The Bureau of Land Management and Forest Service have issued a joint Interim Final Rule amending the National Environmental Policy Act regulations to eliminate the requirement for environmental impact statements for certain types of actions.

SECTION 3. New States may be admitted by the Congress into the Union; but no new State shall be formed or created within the Jurisdiction of any other State, nor any State be formed by the Junction of two or more States, or parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Treasury or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claim of the United States, or of any particular State.

SECTION 4. The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion, and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

Article. V.

The Congress, whenever two-thirds of such Powers shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two-thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid if ratified by three-fourths of the several States, or by three-fourths of the several States, or by Congresses in three-fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided, that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the third Section of the first Article, and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

Article vi.

All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof, and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

Article. VII.

¹The functions of the Committee of one, some what modified by the establishment of the Executive Bureau of State in carrying the laws.

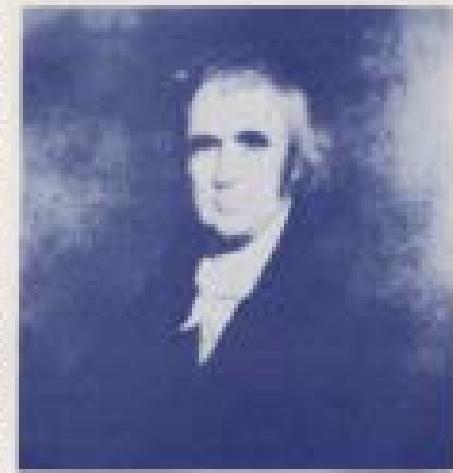

Sons in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twenty-first. In Witness whereof We have hereunto Subscribed our Names.

that either left me

JUSTICE AND THE FEDERAL CONSTITUTION

JOHN MARSHALL

Justice — The Supreme Court

The honorable gentleman, Mr. Story, has expatiated on the necessity of a due attention to certain maxims—
to certain fundamental principles, from which a free people ought never to depart. I concur with him in the propriety of the observance of such maxims. They are necessary in any government, but more essential to a democracy than to any other. What are the favorite maxims of democracy? A strict observance of justice and public faith, and a steady adherence to virtue. These, sir, are the principles of a good government. No mischief, no misfortune, ought to deter us from a strict observance of justice and public faith. Would to Heaven that these principles had been observed under the present government! Had this been the case, the friends of liberty would not be unwilling now to part with it. Can we boast that our government is founded on these maxims? Can we pretend in the enjoyment of political freedom or security, when we are told that a man has been, by an act of Assembly, struck out of existence without a trial by jury, without examination, without being confronted with his accusers and witnesses, without the benefits of the laws of the land? Where is our safety, when we are told that this act was justifiable, because the person was not a Sociate? What has become of the worthy member's maxims? Is this one of them? Shall it be a maxim that a man shall be deprived of his life without the benefit of law? Shall such a deprivation of life be justified by answering, that the man's life was not taken secundum iurum, because he was a bad man? Shall it be a maxim that government ought not to be empowered to protect virtue?

He then stated the necessity and desirability of obtaining amendments. This we ought to postpone until we come to that clause, and make up our minds whether there be anything unsafe in this system. He conceived it impossible to have an army in the country, and he did not see any objection militate against previous amendment. Look at the comparative temper of this country now, and when the Federal Convention met. We had no idea then of any particular system of government, or of the most perfect plan.

our object and wish. It was imagined that the States would accede to, and be pleased with, the proposition that would be made them. Consider the violence of opinions, the prejudices and animosities which have been exhibited. Will not these operate greatly against mutual concessions, or a friendly concurrence? He says, we wish to have a strong, energetic, powerful government. We contend for a well-regulated democracy. He intimates that the power of the government has been enlarged by the convention, and that we may apprehend it will be enlarged by others. The convention did not, in fact, assume any power.

sible to obtain amendments after adopting it. If he was right, does not his own argument prove that in his own conception, previous amendments cannot be had? For, sir, if subsequent amendments cannot be obtained, shall we get amendments before we ratify? The reasons against the latter do not apply against the former. There are in this State, and in every State in the Union, many who are decided enemies of the Union. Reflect on the probable conduct of such men. What will they do? They will bring amendments which are local in their nature, and which they know will not be accepted. What security have we that other States will not do the same? We are told that many in the States were violently opposed to it. They are more mindful of local interests. They will never propose such amendments as they think would be obtained. Division will be their object. This will be attained by the proposal of unreasonable amendments. This, sir, though a strong cause, is not the only one that will

country, it has not only one but two militate against previous amendments. Look at the comparative temper of this country now, and when the late Federal Convention met. We had no idea then of any particular system. The formation of the most perfect plan was impossible for you to manage your business in person, if you repose no confidence in delegates, because there is a possibility of their abusing it, you can have no government; for the power of doing good is inseparable from that of doing some evil.

APPROVAL OF THE FEDERAL CONSTITUTION

BENJAMIN FRANKLIN
Patriot

I confess that I do not entirely approve of this Constitutional project; but, sir, I am not sure I shall never approve of it, for, having lived long, I have experienced many instances of being obliged, by better information or fuller consideration, to change opinions even on important subjects, which I once thought right, but found to be otherwise. It is therefore that, the older I grow, the more apt I am to doubt my own judgment of others. Most men, indeed, think themselves in possession of all truth, and that wherever others differ from them, it is an for error. But, though many private persons think almost as highly of their own infallibility as of that of their sect, few express it so naturally as a certain French lady, who, in a little dispute with her sister, said: "But I meet with nobody but myself that is always in the right."

In these sentiments, sir, I agree to this Constitution with all its faults—if they are such—because I think a general government necessary for us, and there is no form of government but what may be a blessing to the people if well administered; and I believe, further, that this is likely to be well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall become so corrupted as to need despotic government, being incapable of any other. I doubt, too, whether any other convention we can obtain may be able to make a better Constitution; for, when you assemble a number of men, to have the advantage of their joint wisdom, you inevitably assemble with those men all their prejudices, their passions, their errors of opinion, their local interests, and their selfish views. From such an assembly can a perfect production be expected?

It therefore astonishes me, sir, to find this system approaching so near to perfection as it does; and I think it will astonish our enemies, who are waiting with confidence to hear that our councils are confounded like those of the builders of Babel, and that our States are on the point of separation, only to meet hereafter for the purpose

them, we might prevent its being generally received, and thereby lose all the salutary effects and great advantages resulting naturally in our favor among foreign nations, as well as among ourselves, from our real or apparent unanimity. Much of the strength and efficiency of any government, in procuring and securing happiness to the people, depends on opinion, on the general opinion of the goodness of that government, as well as of the wisdom and integrity of its governors. I hope, therefore, for our own sakes, as a part of the people, and for the sake of our posterity, that we shall act heartily and unanimously in recommending this Constitution wherever our influence may extend, and turn our future thoughts and endeavors to the means of having it well administered.

On the whole, sir, I cannot help expressing a wish that every member of the convention who may still have objections to it, would, with me, on this occasion, doubt a little of his own infallibility, and, to make manifest our unanimity, put his name to this instrument.

POLITICAL AND ECONOMIC RIGHTS

WITH A HISTORY OF THE SECURITY AND FREEDOM OF THE INDIVIDUAL

- RIGHT TO WORSHIP GOD IN ONE'S OWN WAY
- RIGHT TO FREE SPEECH AND PRESS
- RIGHT TO PEACEABLY ASSEMBLE
- RIGHT TO PETITION FOR REDRESS OF GRIEVANCES
- RIGHT TO PRIVACY IN OUR HOMES
- RIGHT OF HABEAS CORPUS AND CROSSLY MAIL
- RIGHT TO TRIAL BY JURY, PROTECTED UNTIL PROVEN GUILTY
- RIGHT TO MOVE ABOUT FREELY AT HOME AND ABROAD
- RIGHT TO OWN PRIVATE PROPERTY
- RIGHT TO FREE ELECTIVE AND PERSONAL SOLEMN BALLOT
- RIGHT TO WORK IN CHOICE AND LOCALITY OF OUR CHOICE
- RIGHT TO BARGAIN WITH OUR EMPLOYERS AND EMPLOYEES
- RIGHT TO GO INTO BUSINESS, COMPETE, MAKE A PROFIT
- RIGHT TO BARGAIN FOR GOODS AND SERVICES IN A FREE MARKET
- RIGHT TO CONTRACT ABOUT OUR AFFAIRS
- RIGHT TO THE SERVICE OF GOVERNMENT AS A PROTECTOR AND SIRENE
- RIGHT TO FREEDOM FROM ARBITRARY GOVERNMENT REGULATION AND CONTROL

VACATION IN PARADISE

Now's the time of year when you're probably beginning to think about your annual vacation and where you'd like to spend it.

Before you settle for some place where high prices and blaring jukeboxes are hot on the heels of flocks of tourists, give a thought to one of the world's "undiscovered" attractions: the houseboats and flowerboats are spruced up, and everyone is ready to welcome visitors from the four corners of the world in India's "paradise on earth"—Kashmir—a two-hour flight from Delhi, India's capital.

For less than \$100 per week, you can summer in this idyllic spot which exotically blends the charms of Venice and Switzerland with those of the East.

Houseboats moored on Kashmir's Dal, Jhelum and Nagan Lakes, can be rented for as little as \$50 a week. At first glance, they look a little like Mississippi steamers, but there the similarity ends. Some of them have not one, but two living rooms, two to three bedrooms with connecting baths, and flowered terraces for sunbathing and entertaining. Your rental includes the houseboat, its furnishings, and the services of a staff of four, one of them a cook in his own kitchenboat!

There's nothing to do except enjoy yourself in Kashmir. Just settle back and let the scenery and your surroundings weave their spell, as they have since the days of the Great Moguls in the 16th century.

When you leave your houseboat on the lake, and board a shikara (little boat), you can go to the mainland to marvel at the famous "Garden of Love," whose beautiful marble pavilions, terraces and fountains have survived over four centuries. Or stop to stroll through the avenues of cascades of the "Garden of Pleasure," or to see the "Garden of the Morning Breeze," which is the oldest of those in Kashmir.

If you want a change, you can take excursions into this Himalayan area, which is dotted with lakes—some of them afloat with lotus blossoms, others still and crystal clear.

On Gulmarg, a nearby mountain, you can play golf on a course which is 8,300 feet high. Or you might want to go on a shikar (hunt) and try your hand at shooting snow leopard, tiger, Kashmir stag and a host of other animals.

The city of Srinagar near Dal Lake, where many of the houseboats are moored, is a must on the itinerary of travelers to this area. One of the

most unique sights here are the houses with their gay flowering rooftops.

The bazaar of Srinagar is somewhat akin to a Hollywood epic showing scenes of the East. Men in fur caps and women in tent-like robes haggle endlessly under the awnings which cover the stalls. Horse-drawn rickshaws (carriages) clip by, and old men in turbans survey the scene as they draw thoughtfully on their narghile (pipes). The stalls in the bazaar display a magnificent assortment of wares—carved woodwork, hand-painted papers, machine items, shawls, carpets and semi-precious stones.

Kashmir has other beauties, too. The air is soft and soothing, the valleys are rich, the pastures green. A doctor might bottle this atmospheric and scenic "tonic" for the world weary, if it only could be bottled. But the charms of Kashmir can't be packaged. It may be easier and less expensive than you've realized, though, to go there and enjoy them for yourself!

MORSE & CORNELL . . .

Morse agreed to hold the failure secret but still insisted that they were ruined for the failure of signals to pass in time he known.

The next day Ezra ordered more oxen chained to pull the plow and told the drivers to keep the oxen going as rapidly as possible so a new record might be made. Ezra himself guided the plow and according to the story he told his relatives he watched until he saw a big rock he thought was firmly entrenched in the earth and then, instead of guiding the plow around the rock, he headed the plow into it and the plow broke.

Then word was passed to the public that laying the conductor had been halted for the plow had broken. No mention was made of the failure of signals to pass through the conductor already in the ground. Ezra at once went to consult the famous Joseph Henry who had made important discoveries in the electrical field and soon was to become director of the newly organized Smithsonian Institution. Henry suggested that the telegraph conductor be supported on wooden poles, using the glass device which had been developed to support lightning rods to protect buildings.

This was done and on May 24, 1844, the first official message was sent over the completed line with quotation from the Bible regarding the wonders God had wrought.

Some people considered the telegraph a fraud and would not believe the messages which were reported had actually been transmitted electrically. Some members of Congress who voted in favor of the grant of money to Morse were not elected to serve again at Washington. The further development of telegraph service in America was by private financing.

After the completion of the Washington-Baltimore line, Ezra Cornell devoted his whole time to establish telegraphic communication between other pairs of leading cities of the country. He saw the advantage of a communication system covering the entire country and was instrumental in forming the Western Union Telegraph Company of which he became president. His activities in bringing this service into use brought him great wealth.

In 1859 Ezra settled on a large farm near Ithaca. On his visit to relatives in Plainfield about that time he told them that he had accumulated so much

wealth as he thought one man should have and was retiring and did not plan to gain more money. At that time he was about 30 years old. When his relatives asked what he was planning to do in retirement he said his problem was to find what was the best use of his fortune.

When the act to grant states public land for use in establishing colleges and universities was signed by Lincoln in 1862, Cornell used his influence to have New York pass a law which provided for that state to establish but one institution and to allow him to select and hold the public land available for New York. He contributed \$500,000 to help establish that institution at Ithaca, and the formal opening of the Cornell University was held in 1868.

On visits with relatives in Connecticut he told them of his extensive travels to examine public lands which still were open. His aim was to select land which he believed was of greatest future value. He chose some which had mineral resources, some with valuable timber and some that were good for

farming.

History records that after a time a protest was made in the New York Legislature that Cornell was using his influence in connection with land grants for his own personal profit and that Ezra raised no objections to the proposed investigation. He said he welcomed such an investigation for it would show he had acted to bring the greatest possible amount of money for the support of the university at Ithaca. By Ezra's selection of land and holdings it until values had increased, something like a million dollars came to the new university.

On one of his last visits in Plainfield his relatives protested that the name of the university at Ithaca was called "Cornell" with accent on the last syllable. They said "Our name is 'Cornell'" was accent on the first syllable. You should not allow that."

Ezra replied that his aim was to establish an institution where any person could study any subject, and that he was glad to have them pronounce its name in the way they liked best.

FIRESIDE CHAT . . .

from whence technical and complex operations are possible down to 6,000 feet, are targeted for that date, as well as a world-wide buoy system for monitoring ocean weather conditions...

Ocean mining is having its problems in that, at present yields, the cost of obtaining the minerals from the ocean has been prohibitively high... We have looked into the possibilities of mining phosphorus and manganese and find it would be a long time before the projected costs can compete with land sources... It is hoped that marine mining technology will improve, bringing the cost down to where some of the minerals can be extracted competitively...

Most of the commercial experience in under-ocean technology has been obtained drilling for oil and gas off the shores of California, the Gulf Coast, Mexico, Alaska and the Persian Gulf. Some 6 percent of the total oil and gas produced in the United States comes from off-shore locations. There are those who predict that within a few decades more oil will be produced off-shore than on-shore... (For off-shore wells) it will be nec-

essary to develop new platforms with better mooring and capable of being located at precise locations. It is still a very difficult task to move men and equipment to and from these rigs. Our company has been active in supporting the off-shore drilling industry and is capable of producing well-ahead equipment operating at depths as low as 600 feet. Most of today's off-shore drilling is done at much shallower depths, but... by 1970 we expect to be recovering oil at thousand foot depths beyond the edge of the continental shelf.

PHILADELPHIA

ALUMNI LUNCHEONS

on the first Monday
of each month.

OCTOBER to MAY
at the ENGINEER'S CLUB
Everyone Welcome !!

CHAPTER NEWS

GAMMA, Ohio State University—During the Fall Quarter, Gamma Chapter pledged eleven new members at Initiation Banquet. Here the Chapter also tested the house office research and manufacturing facilities as well as viewed a series of slides showing on the applications of Aviation products. Pledge class assisted preparing the annual Newsletter of the Electrical Engineering Department. After completing the task, the pledges were initiated at a banquet held in The Country Inn in Worthington on December 1.

Other HKN fall projects include departmental coffee hours to promote student-faculty communications, and ground work on obtaining active participation of graduate students in HKN at Ohio State.

Early in Winter Quarter, Gamma Chapter sponsored a tour for all interested electrical engineering students to North American Rockwell in Columbus. Here flight simulation facilities were viewed.

DELTA, Illinois Technology — During the Fall semester the Delta Chapter initiated its members into the fraternity. The banquet was held on Dec. 16, 1968 at George Diamond's Social House. The guest speaker at the banquet was the National Vice President of HKN Mr. Jack Parry. His talk was about the organization's project to acquaint the high school students and college freshmen with the ever widening field and challenges of electrical engineering.

IOTA, University of Missouri — The Iota Chapter of Eta Kappa Nu at the University of Missouri conducted tours over the engineering campus at Columbia on University Day last Sat. Some 4000 high school students attended the event, which is held annually to give them an opportunity to tour the campus of the University of Missouri at Columbia.

The initiation ceremony for new initiates was very impressive this semester, being completely conducted by members of the faculty. After the initiation of the largest pledge class in the history of Iota Chapter, it held a joint banquet with the Missouri Alpha Chapter of Tau Beta Pi.

UPSILON, University of Southern California — Began its activities for fall semester, 1968 on November 1 with the "Sister". We introduced our new candidate to membership in the undergraduate and graduate members, and to representatives of Los Angeles Alumni Chapter. Student-produced films were shown and informative service round out a very interesting and enjoyable evening.

We conducted our pledge week from Nov. 13-17. The activities included constructing an HKN wooden key, displaying a model bridge of a Whistler bridge with a walkable light, and meeting electrical engineering faculty members. The week was concluded

on November 17 with an evening of tests and interviews, and the informal initiation.

We held our formal initiation January 6, 1969. Nine graduate and seven undergraduate members were initiated at this ceremony. Our banquet followed the initiation, a banquet was held. The speaker, a member of the history department who had just returned from a year of teaching at colleges in Salzburg, discussed his impressions and answered the many questions his constituents caused. Many remained afterwards discussing with him things he had said. During the present term, we have conducted tours during Bevier Open House, a day when high school students come down to look over the school.

BETA ALPHI, Drexel Institute — On December 2, 1967, the Beta Alpha Chapter of Drexel Institute of Technology initiated twenty new members. On January 4, 1968, (Continued on Next Page)

WHO'S WHO IN ETA KAPPA NU

Chairman of the Board of the American Electric Power Service Corp.

In addition, many of Dr. Kurtz's friends and former students have worked together to establish an Iowa University Foundation annual award to the outstanding senior E.E. Student. The award is known as the Edwin B. Kurtz Merit Award and is administered by The Beta Iota Chapter of HKN.

Professor Kurtz was born on December 10, 1894, in Cedarburg, Wisconsin, where he received his primary and secondary education. He attended the University of Wisconsin and received the Bachelor of Science in Electrical Engineering degree in 1917. Two years later he received the Master of Science in Electrical Engineering degree from Union College while employed by the General Electric Company in Schenectady, New York. The Doctor of Philosophy degree was awarded in him by Iowa State University in 1932.

Dr. Kurtz is the author of seven books and forty-six papers. In addition to being a National President of Eta Kappa Nu, he has served the Association conceiving and assisting in the promotion of many different projects, such as the HKN Movie. Ed is definitely one of our oldest and best friends.

CHAPTER NEWS (continued)

BETA THETA. University of Illinois — The second annual student faculty "mix" held at a local nightclub. The current members of the chapter include maintaining a list of graduate school catalogues, visiting undergraduate students, sponsoring an HKN versus EE faculty bridge tournament (HKN and faculty certainly tied at oneჩoliday party), playing basketball and bowing with other fraternities, and maintaining a student lounge in the EE building.

BETA DELTA. University of Pittsburgh — This fall the Beta-Delta Chapter inducted fourteen new members into our organization. Their pledge duties included bringing our files up to date. We have engaged in a teacher evaluation program. This gives all the students in the Electrical Engineering department a chance to voice their pride or disapproval of the instructors whom they have encountered over the past school year.

We are presently trying to start a tutoring program in which the brothers will help the E.E. students who are having trouble with their course work. We are also beginning preparations for Engineer's Week which comes in the middle of March. At this time the University gives the engineers an opportunity to show what they can do. There are games, dances, and exhibits. Each department competes in ability, enthusiasm, and attendance. Eta Kappa Nu traditionally spearheads the effort of the Electrical Engineering department. Our pledges are usually given constructive tasks in this area.

These three, teacher evaluation, tutoring, and Engineer's Week, are the main activities in which the brothers of Beta-Delta chapter are involved.

BETA THETA. Massachusetts Institute of Technology — This term the chapter inducted 57 members into Eta Kappa Nu. With such a large number of pledges we were able to conduct a variety of useful pledge projects such as:

1. Institute a system of providing information about companies which recruit electrical engineering students for permanent and summer work.

2. Update and expand our publications of electrical engineering Graduate Schools.

3. Prepare a study outline of specialization in electrical engineering and relate this to specific subjects of instruction available at M.I.T.

On January 12, an impressive banquet and initiation was held. Speaker for the banquet was Professor Jay W. Forrester of M.I.T.'s Sloan School of Management. He illustrated how the concepts of control theory are being applied to the study of the dynamics of business.

BETA IOTA. University of Iowa — The fall semester informal initiation was held on the night of November 17 and continued through the next morning. We then concluded our formal initiation in the afternoon of December 1. The formal initiation was followed by the dinner-banquet that evening. Five new members were elected.

Beta Theta's Light Box

We administered the E. B. Kortz award which was started last year. We are now revising and improving the certificate and method of selecting the winner. The members of Eta Kappa Nu are to interview candidates with the faculty making the final selection.

GAMMA THETA. University of Missouri — Has had another active semester. Again this semester we have been able to award a \$200 scholarship with money raised by the selling of ET laboratory insurance. Also an extensive display of articles providing information from schools offering graduate work in EE has been constructed for use by EE students. A photograph display of EE instructors has been made and now sits in the front lobby of the EE building.

Gamma Theta was again happy to provide guides through the EE building on Parent's and Engineer's Days.

DELTA ALPHA. Wayne State University — Held initiation ceremonies for 11 new members. This brings the number of actives up to 34. Of particular interest was the pledge project. It was a joint effort by all

the pledges to make 3 lectures for the initiation ceremony. The general estimation was that these lectures would add more meaning and dignity to the occasion of the ceremony.

Then too, the Chapter has been interested in the establishment of a graduate school information library. This library would contain information pertaining to the various graduate schools beyond the country thus enabling an average by which a student could obtain all the facts he desires to know. In affiliation with this assignment, the chapter is also endeavoring to publish a pamphlet in regard to Wayne's graduate school which may then be distributed to various schools in the nation.

DELTA BETA. Lamar Tech — This fall our efforts were concentrated into a joint effort with Chi Epsilon, the Civil Engineering honor society. Several afternoons a week were devoted to teaching a side rail course. The project was considered very successful, primarily because of improved attendance over last year. Since our school is small, both honor groups found the joint effort beneficial.

We hope that a regional meeting similar to the one at Southern Methodist University last spring will materialize again. The meeting revealed actions of state-wide chapters and provided a number of ideas for improving chapter operation.

DELTA KAPPA. University of Maine — The activities of the chapter in the fall semester of 1962 included maintaining the Department Reading Room, tutoring of Sophomore Electrical Engineering students. Members of Delta Kappa assisted in a tour of the Electrical Engineering building for about 200 Boy Scouts. Plans were made for speaking to local high schools about electrical engineering as a career.

DELTA TAU. University of Southwest Louisiana — During the fall semester of 1962, the Delta Tau Chapter of Eta Kappa Nu obtained 1960 DUES obtained from N. A. S. A. These dues were received from their offices in Houston, Texas to be shown to the Electrical Engineering Department at our University. One film, "The Four Days

of Gemini T", was a general information film, while the other, "Fifty Moon Landings A Day", showed the role of the analog computer in calculating moon landings.

Our chapter has decided to purchase a file cabinet to consolidate our HKN records. We also co-operated, with IEEE, in Christening dinner for all engineering students and their dates.

Several other projects, including a field trip and the possibility of publishing a brochure for the EE Department, were considered. There has been no definite action taken on these proposals.

DELTA SIGMA. University of Notre Dame — Delta Sigma had an active first semester and a dynamic spring term was forecast. The early activities included a graduate school seminar conducted for approximately one-hundred further studies. Three professors, each from a different college in the University, were present to give a diverse and complete view. A tutorial program was set up for the sophomore EE's to assist them in their endeavors. New members were traditionally selected and a banquet was held to welcome them.

The spring term was launched with an open house for all freshmen and was an overwhelming success, with more than一百-and-fifty "leads" according. A similar project is again planned in March with demonstrations in each of the laboratories as well as acceptance of new members. When warm weather arrives, the year activities will be concluded with a banquet and spring outing.

DELTA OMEGA. University of Hawaii — The Delta Omega Chapter started its activities for the fall semester by holding a pledge luncheon at the East-West Center, University of Hawaii, on November 7, 1962. Prospective members were introduced and told about Eta Kappa Nu. Pledge candidates were required to make pledge badges, visit schools to demonstrate electrical principles, organize the engineering study hall, and construct a permanent HKN bulletin board. Initiates will be inducted into the Delta Omega Chapter on February 1, 1963.

The Delta Omega Chapter continued to serve the Electrical Engineering Department by grading homework papers for several introductory courses. The Outstanding Sophomore award recognizing superior work in engineering was presented this year to Daniel S. Takai.

EPSILON ZETA. Lowell Technological Institute — The first semester pledge period which started late ended on January 3, 1963. The senior pledges gave talks on subjects pertaining to electrical engineering while juniors had to prepare short films which will be shown to visiting high school students later on this year. Other activities include help classes which are offered to all Junior and Sophomore EE students on a regular basis. Tours are also given to prospective EE students a number of times throughout the year.

Alpha inducted 12 new members into its chapter. The formal initiation of the new members was held on December 2, under the direction of Chapter President Richard Shull. A joint initiation-banquet with the membership of Tau Beta Pi was held following the initiation ceremonies.

As a service project for the school, the members of the chapter decided to undertake a tutoring program for undergraduate engineering students. Due to the complete support by the members for this program, it was also decided to make this tutoring program a permanent service for the school.

EPSILON OMICRON. University of Delaware — Inducted 17 undergraduates, four graduate students, and one faculty member this fall. Among the undergraduates was the first woman to be inducted by our chapter.

Undergraduate candidates were required to submit and wear a pledge pin bearing the Association's colors and containing at least one working electrical part. Several interesting and novel designs resulted.

The new members were honored at a banquet following the ceremony.

EPSILON NU. Tennessee Technological University — Recently concluded a busy fall quarter. The primary activities of the chapter consisted of the formal and informal initiation of several new members. One of the activities required of the new pledges for the informal initiation was the presentation of a program to the Freshman Engineering Society.

Immediately following the formal initiation the members of the chapter attended a banquet with Dr. Ballal of the Tennessee Technological Biology Department to the Freshman Engineering Society.

Other activities of the chapter included the formulation of the bylaws for the chapter.

The Great Sahara Mousehunt

**Catherine Collins
and
Miggs Pomeroy**

Miggs

Copyright © 1962

On 13th March 1961, a group of fourteen people in six cars started from the North African coastal city of Benghazi for a trip across the Sahara Desert to one of the most inaccessible mountain ranges in the world—the Tibesti. The trip was made mainly for fun and adventure. Miggs Pomeroy, with the U.S. Information Service in Benghazi, was the leader of the expedition. He took his wife Catherine, Alan and Catherine Collins, his

brother-in-law and sister, came from New York, and Randolph Churchill and his son Winston from England. Dr. Henry Bates was collecting mammals for the National Museum in Washington. The British Army stationed in Benghazi sent six soldiers under the command of Lieutenant Francis Gibbs of the Royal Scots Regiment.

The fascinating account of this desert escapade is being published serially in the BRIDGE

25TH MARCH

THE MEN HAVE rigged suspension, one by No. 4 so that Taffy and John can work without being fired at and one in front of No. 5 for us to loaf and Hank. Francis has taken Winston and Hank and two others to make a reconnaissance and see if they can find the marked track for Uweinat. The big group is for digging the car out should they bog. They find the track about ten kilometres ahead. A marked track consists of an iron post on the top of a dune, outcropping or any available high spot. Alternatively cairns of rock are used; these are so obviously heaped up by man that they cannot be mistaken. The markers are approximately five kilometres apart and each should be visible from the one before or after it. However, the iron posts cannot be relied upon as they are sometimes blown down by the wind, and sometimes stolen for tent poles by Bedouins.

At camp Liv spends most of the day under his car repairing the speedometer; he is very sweaty and hot-looking when seen at all. Catherine and I have made Bikini tops from the bright orange distress-signal flags. We want to roll back into Benghazi with impressive tops. When the reconnaissance party has returned we all crowd under the tarp and eat bread-and-cheese, peanut butter (a discovery for the British who pick at it suspiciously but deduce in favour), sardines packed in oil, which we decide has once seen the inside of a petrol-drum, and tinned fruit. Frank regales us with stories about officers, none of whom does he seem mad about. 'No,' he says, 'none of them air very wet, exceptin' me. Mister Gish sure.' There is no enthusiastic dinne

from the other men. Liv tells them that all arabs are alike and they are made quite happy hearing how hard an American soldier's life can be. Winston spends the afternoon napping with a book from his 'required reading' shading his face to keep the light out. Charlie is sun-bathing behind one of the cars. He is

very fat and will probably burn and this can be his own fine patient.

Unlike the wastes of Southern California, Arizona and New Mexico, this is no living desert. In some places—and this is one of them—it is completely devoid of life, and man or beast may die, and even the bacteria are not there to decay the flesh. Eventually the wind-blown sand clears the bones down to a glaring sculpture in white. Distorted by shimmering layers of hot desert air, a heap of bones may look from a distance like a tall white spire, or, stranger still, a white cloud floating above the horizon. Only a couple of years ago a Polish explorer left Kufra for Uweinat with a guide and a pack camel. No one knows just what happened, a fight of some sort certainly. For in the night the guide folded his tent, like the Arabs, and silently stole away. He says that they ran out of water and that the Pole would not take his advice, so rather than die with his employer he returned to his home. The Pole was found two weeks later completely mummified. No kindly Mother Nature here. We have talked of dying of thirst. It is not quickly done. Some say the victim goes mad first. Certainly every bit of body-liquid is consumed, and when that is gone pain takes over. Liv thinks the eyes must be the first to go and the worst. Catherine agrees; nothing can be worse than to be blind and in such agony that there is no room even for fear. She is rather an eye-minded person in any case, and carries four pairs of glasses about her. She has a pair of sunglasses, an extra-dark pair called elephant-glasses, glasses for ordinary use and for reading. She is always examining them and they turn up in various cars according to whom she has been visiting. Liv instructs her when dying of thirst to use the last bit of moisture to dampen a cloth or whatever is available to cover the eyes. As to thirst itself, that marvellously informative document *Desert Survival* (by Alonso Pond and Paul Nestor) says if there is nothing to drink avoid eating, as food will not sustain you but only cause great agony. You can go seven days without food and if you are not rescued by then you are finished in any case. By no means drink alcohol, blood or urine, all of which contain a heavy residue of protein. If you have a canard available you may cut into his stomach and drink the liquid which, while not Coca-Cola, is apparently better for you than whisky, blood or urine. It is also said that if you get the animal and crawl into the damp shady cavity thus created you will further prolong your chance of survival. Catherine and I wonder if it's worth it. We also think that a mouse trap might assist in your walking home well in the rear of the party.

The sun is boiling hot but the shade pleasantly cool. Despite the lack of life in the desert an armoured-plated insect with striped legs has appeared out of nowhere. I've offered it bits of bread but it seems to want my hand. I've moved twice but it only follows me around. I'm afraid it's going to want to come to Tibesti with us. Anyway, I don't understand what it lives on out here where there is nothing. Liv thinks that it may have come in the car from Kufra, which gives one to think of what else may be in the cars. Catherine says in that case we can't abandon it here but it's not to travel in No. 2. She says it looks gaunt and hungry. The boys say if I'd just stop fidgeting about they will find out if it's a carnivore. I have retreated to the car where I am pretending to read. Not that I am afraid, of course. I notice that the others have all found excuses to take themselves off, leaving our two-legged stowaway to scamper from one cot, sleeping-bag or blanket to another.

The scorpions, which Liv promised Catherine would only be around an oasis, keep themselves pretty invisible, though we have seen tracks where they have scurried crab-like between our beds at night. Catherine, since she first heard that both scorpions and snakes will curl up into the toe of a shoe, has been taking her shoes to bed with her. She says that if they were dainty little

shoes it would be all right, but she keeps stumbling over them in her sleep. Hank has not bothered to set the traps out here. In some parts of the desert, such as this, you never see a metacar-trail; in others, seemingly as arid, there are thousands of them. The foxes and jackals, so common in the oasis, hardly ever venture into the real desert, though Hank thinks that they occasionally do, during the season when birds migrate.

Beds more than anything else give one a realization of the immensity of the desert. It seems reasonable enough that a man or animal could die of thirst; but should not a bird, figuratively and literally, be above this? But even they are not, poor things. However with their flight they have to go sometimes hundreds of miles to find water, and all of the time fighting air so thin they must use twice the energy and develop a thirst twice as fast as they normally would. Every bit of shade, outcropping of rock, the bulk of any abandoned truck, the north side of any jettisoned oil-drum harbours a few dried-up feathers or a pathetic little mound of white bones. For some reason wagtails and swallows suffer the most. Perhaps what I first thought was inquisitiveness was a desperate search for shade, for they often come into camp. On several occasions we have put water for them, but none of us have seen them take any. Hawks and falcons manage to survive in the bleakest spot, but then they have the migrating birds to feed on. We have seen many of them on the lowest craggiest outcroppings. Where they have roosted, the ground below is littered with castings of feathers and bones.

Taffy and John are covered with black oil and glory. They have replaced the clutch-plate in No. 4 in ten hours. We will be able to start off at dawn. Liv has fixed his speedometer, and Francis has finished The Black Rover. Not knowing how long we might be over the breakdown, he has been very military over 'water discipline' and we are all thirsty. Winston has been cheering us all on by saying that if the worst comes to the worst he will let us drink the hot-water-boiled water. We watch Venus set with pleasure tonight.

26TH MARCH

THIS IS WHEN in the night, and while we intend to get off at dawn it is just too hard dragging ourselves out of our warm covers. Everything is covered with layers of dust. We can all hear the sand on our teeth; it is gritty like sugar, but doesn't dissolve. Hank is always good for a cheering word at breakfast but I'm afraid he gets no cheering response. The Scots are dear and so are the English, the Welsh and the remaining Americans.

Obviously, almost no one goes to Uweinat. Trail-markers which have blown down have been left down. We do not have far to go but it is a bad sand day. Archie calls it 'fat lady' sand; we are not sure whether he is thinking of softness or roundness, for truly we are in a soft and dimpled land. At midday, we have found, the sand expands and its crust crumbles more easily. Personally, I do not think it needs an excuse to crumble. The track leads us through the dunes, but, track or no, we are not the trusting souls who left Benghazi two weeks ago. We line the cars up and wait while Francis and Archie and Hank set out at a brisk military pace to test out the sand. When they can walk without breaking through we can risk following. At that, one car takes off at a time, and we watch with bated breath as first one and then another sinks over the sand in the next dune, whence the walking party has already set out to test the forward stretch. I think the dunes look like mountains but Liv just says he doesn't like mountains, anyway. We drop in the afternoon to a gravel plain ridged by watercourses which have from time

Pool that Winston Churchill did wash dishes.

to time raged down the high black mountain that is Jebel Arkenu. There are two trees here with red skinned-alive-looking bark and thorny branches. One is split in half, both sides growing; the other is stunted, but a little Napoleon to be growing here at all. We all walk around and look in awe at these two trees. Later we hear that we have come through a 'Forest'. We all taste the foaly bitter melon which are on the ground near by. Hank says they are poison and I believe him. In the distance we can see Mount Uweinat, pink and craggy against the sky. Through binoculars one hill is quite transparent; you can see the other hills slope down behind or through it. This is my discovery, this glass mountain. Everyone studies it with awe. Hank photographs it. He is depressed not to have a scientific explanation and says it may be a ghost mountain.

We embark again but Archie spots a little animal at the foot of the Jebel. Three pairs of binoculars are out in an instant. Hank, whose eyes are binocular anyway, shouts, 'Ammotragus leoria, Aoudad, Liadan, where's my gun, Barbara sheep' and ten men jump for guns with the speed of a bunch of guerrillas who have sighted the national enemy. We race on towards the hills, bar on the hood of one car taking careful aim. Hank shooting out of his window as he drives with his knees. The little animal stops marching whatever it was marching and stares for a moment, and then, as the cars race to a stop almost beside her, she turns and hops up the mountain. The men stumble out of cars. Liv's long legs catch on the sand tracks as he slides off the hood, and he lands on his knees and scrambles off at a crouch to take aim. A shower of bullet ping against rock. The little animal looks a very domestic sort of goat and for a moment Liv lowers his gun and says, 'My God, I think it's somebody's pet.' Someone asks 'Whose?' and the desert echoes with the thought.

A Barbary sheep is a most elusive creature, perhaps the most in this country. This one is small and reddish and it moves by levitation, hopping up one great boulder after another without visible effort while the men struggle in pursuit, with effort that is both visible and audible. They all grow smaller, and presently only the ping of bullet hitting stone is heard. Catherine is sitting nearby beside me saying her prayers, I think. Probably 'God help all nice little red goats and confound their enemies.'

'It's for science and dinner,' I cheer her, or try to. Catherine mutters, 'I don't like science and we've still got plenty of hash,' and then she relents and hopes that nobody breaks

their neck, ankle or any other member. Whatever her prayers, it seems the bus is an inside track for the men come back hot, dusty and barberry-sleepless.

Uweinat is a six-thousand-foot mountain range rising out of an alluvial plain, which latter we crossed with only two breakdowns. Both cars in question had an attack of carburetor trouble. The first to sputter to a stop, being the last car in convoy, staggered ahead frantically with horn, lights and mirror. No one, it seems, heard or saw. The stalled car sat, and its occupants numbed, until Frank, noticing something missing from his truck, turned back, untrude the shadow, saw him sailing on his way only to find his own carburetor clogged. Perhaps a desert drain in this spot is unfavourable to carburetors.

From a distance Uweinat is air-brushed against the sky, all pink turrets and embattlements, Gothic cathedrals, and Norman walls. Climbing endless roads are processions of stately pink slaves, their dignity only interrupted when the mountain erupts into a leering gargoyle or five fat-toes campaign into the sky. Below, the long-slow avalanches of rock diminish in size as they come closer to the earth. We find Aïn Zwaïa nestled in a curve of the mountain's base and wonder at the sloping of brown-paper houses. So completely are we fooled by the perfection of perspective of this place that we misjudge every distance and size. One kilometre into the base of the mountain turns into five, the paper houses are houses and the avalanche of rocks are boulders as much as twenty and thirty feet high. The houses are Teba huts, cocoon-shaped and made of fine palm-matting, but most of the people in this little spa live in caves formed by the toppled boulders. In front of one cave the flag of Libya announced the office and residence of Corporal Salam Abukader, Chief of Police. If we are seeing everyone, and I don't see how it can be otherwise for they all want to shake hands, there are about twenty-six males in this parish and seventy-five per cent of them are children. I think that we must be a welcome sight, for not only are visitors rare but the supply truck only comes here once in three months. Liv disappears with our paupers and his golden tongue into the official cave, to exchange formalities and greetings. The rest of us go to drink and dunk our heads in running water and ogle at that great invention, the tap. The wheel is supposed to be man's greatest, but Catherine and I think the tap has first claim. The wheels within wheels we are not particularly concerned with. You turn the tap and water gushes forth. This is enough of a miracle. Of course, the men want to know where the water comes from and where the pump is and a lot of nonsense.

We make camp some five kilometres away at a village of boulders, well protected from the wind, we think. We are far enough from Aïn Zwaïa to feel the flies, or so, again, we think. The wind for the moment is quiet, but the flies are smarter than we by far. Some of them have hitched rides, some followed probably self-boarding on our backs, some walked and some came by camel. We swat them and talk to them as we unpack. One car has gone back to Aïn Zwaïa to fill up our water jerry-cans. Hank has gone off to set traps. Frank has tea on the stove, and Catherine and I are looking into food boxes. Jack is hoisting his aerial and Winston is washing his face.

After dinner Hank, Liv, John and I take one car and one gun for a shoot. We want game but we will be satisfied with mice. The moon is bright and we drive straight out from the mountain. It has not rained here in years. When it does rain torrents pour off the mountain and the plain is said to be green. The dry torrent beds look almost like roads in the moonlight. One of them leads us to a camel pasture where some moisture must be trapped in a fold or fissure under the surface, for there is wiry grass here and bits of shrub that look like shredded wheat and which the camels eat without cream or sugar. There are also stunted thorn-trees.

Discouraged at last, we turn back to the mountain, as impressive as ever except that now it is black instead of pink; the stars run down on it, and at no time has not a single light shone to welcome us home. Have we gone farther south than we thought, are we coming into another mountain in the range altogether? Or have the others secretly gone to bed and like good economical Scots turned out all of the lights? Hank is encouraging, perhaps afraid that I will worry. He says: "We're right on the beam. We'll come in north of the camp and hunt fits along the base of the mountain. We're right on the beam."

I refuse to be tranquillized. None of us has ever seen the silhouette of the mountain from this place before, so it seems to be axiomatic that we cannot know where the beam is, let alone be on it. "We're lost," I mutter croakily, and wonder just how cold the night will be in sheets and no sweater, how hard the sand will be hot or air matted. The men are no better dressed than I, and I won't even be able to take female advantage and let them strip to keep me warm, without having three such men on hand. Furthermore, being lost with a bag full of game would be one thing; I decide that there is an ignominy to being lost without having fired a shot. We come in at last to the base of the mountain and move along first to the north and then backtracking to the south. No camp, no Aïn Zwaïa, no beam. Hank continues to be cheerful, Liv optimistic and John silent. As for me, I bemoan. But perhaps no one feels it but myself; I am like an inward-growing porcupine. I don't mind being lost but I want to be lost steadily, so that I can enjoy the desert without undue chagrin. And of course eventually we find Aïn Zwaïa, its little straw boxes attracting pools of starlight; in six adults, twenty children, four goats, two camels, six horses of flies, all sleeping peacefully. From here we know the way home and we turn and skirt the mountain. Even now we almost miss camp. Among the boulders the cars are toys, dark and dwarfed. It is midnight when we come in and we are not particularly quiet, taking revenge by stumbling over our beds and rattling our wash-basins and tooth-mugs. They could have left one lead-kindly-light on.

Somewhere in the night a plane whines overhead. Probably running between Khartoum and Beograd. It is strange to lie here and think of that bubble of comfort suspended so precariously over this hostile desert—well-turned hostesses with well-chilled martinis, children asleep under dimmed lights, crumpled mothers. As I search among the stars for that red-and-green star, I do not envy them.

(Continued)

As required by the Post Office, the BRIDGE mailing list is now set up numerically by Zip Codes which is not the same thing as alphabetically by states and cities. Therefore, when you send an address change to national headquarters you must send the old address and old Zip Code number as well as the new address and new Zip Code number.

Thomas, I pay you a hundred and fifty dollars a week to be my chauffeur, now don't just sit there... do something.

Late for dinner again.
My wife'll shoot me.

Do these people realize it's a 25-hour-a-year man? Me!

Where I work I'm addicted to truck exhaust fumes.

The game is over, Charlie!

John, Darling, the pines
are coming
a little quicker now.

To solve America's man-sized traffic jams, Westinghouse needs man-sized minds.

We have already built the first completely automated experimental transit expressway in Pittsburgh... been awarded contracts for the propulsion and control system for the

160 mph New York-to-Washington train... and a completely automated control system for San Francisco's Bay Area Rapid Transit system.

Transportation is just one of many

areas of Westinghouse that need the talents, creativity and interests of your students.

What is there left for you to discover?

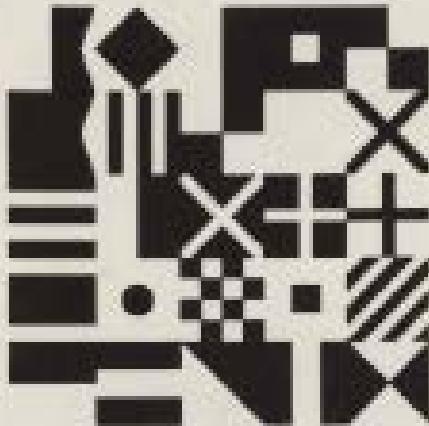

Cyrus the Great, King of Persia, built a communications system across his empire some six centuries before the Christian Era. On each of a series of towers he posted a strong-voiced man with a megaphone. By the 17th century, even a giant megaphone built for England's King Charles II could project a man's voice no further than two miles. This same king granted Pennsylvania to Admiral William Penn as a reward for developing a fast, comprehensive communications system — ship-to-ship by signal flags.

We waited for the combined theories of Maxwell, Hertz, Marconi and Morse before men could transmit their thoughts by wireless, though only in code. Only after Bell patented his telephone and DeForest designed his audion tube could men actually talk with each other long-distance. Today nations speak face-to-face via satellite. Laser-beam transmission is just around the corner. Yet man still needs better

ways to communicate across international boundaries.

In a world that has conquered distance, in a world whose destiny could hinge on seconds, man is totally dependent on the means which carry his voice and thoughts. It is this means that we in Western Electric, indeed the entire Bell System, have worked on together since 1882.

Our specialty at Western Electric is the manufacture and installation of dependable, low-cost communications systems for both today and tomorrow. And to meet tomorrow's needs, we will need fresh new ideas. Your ideas. There is still much for you to discover right here at Western Electric.
