# Active antenna array system

The 475 antennas are divided into 25 groups, each consisting of 19 elements. Each group can be driven separately. The six boxes A-F represent the booths which accommodate the TR modules. The shaded area shows groups accommodated by booth A.

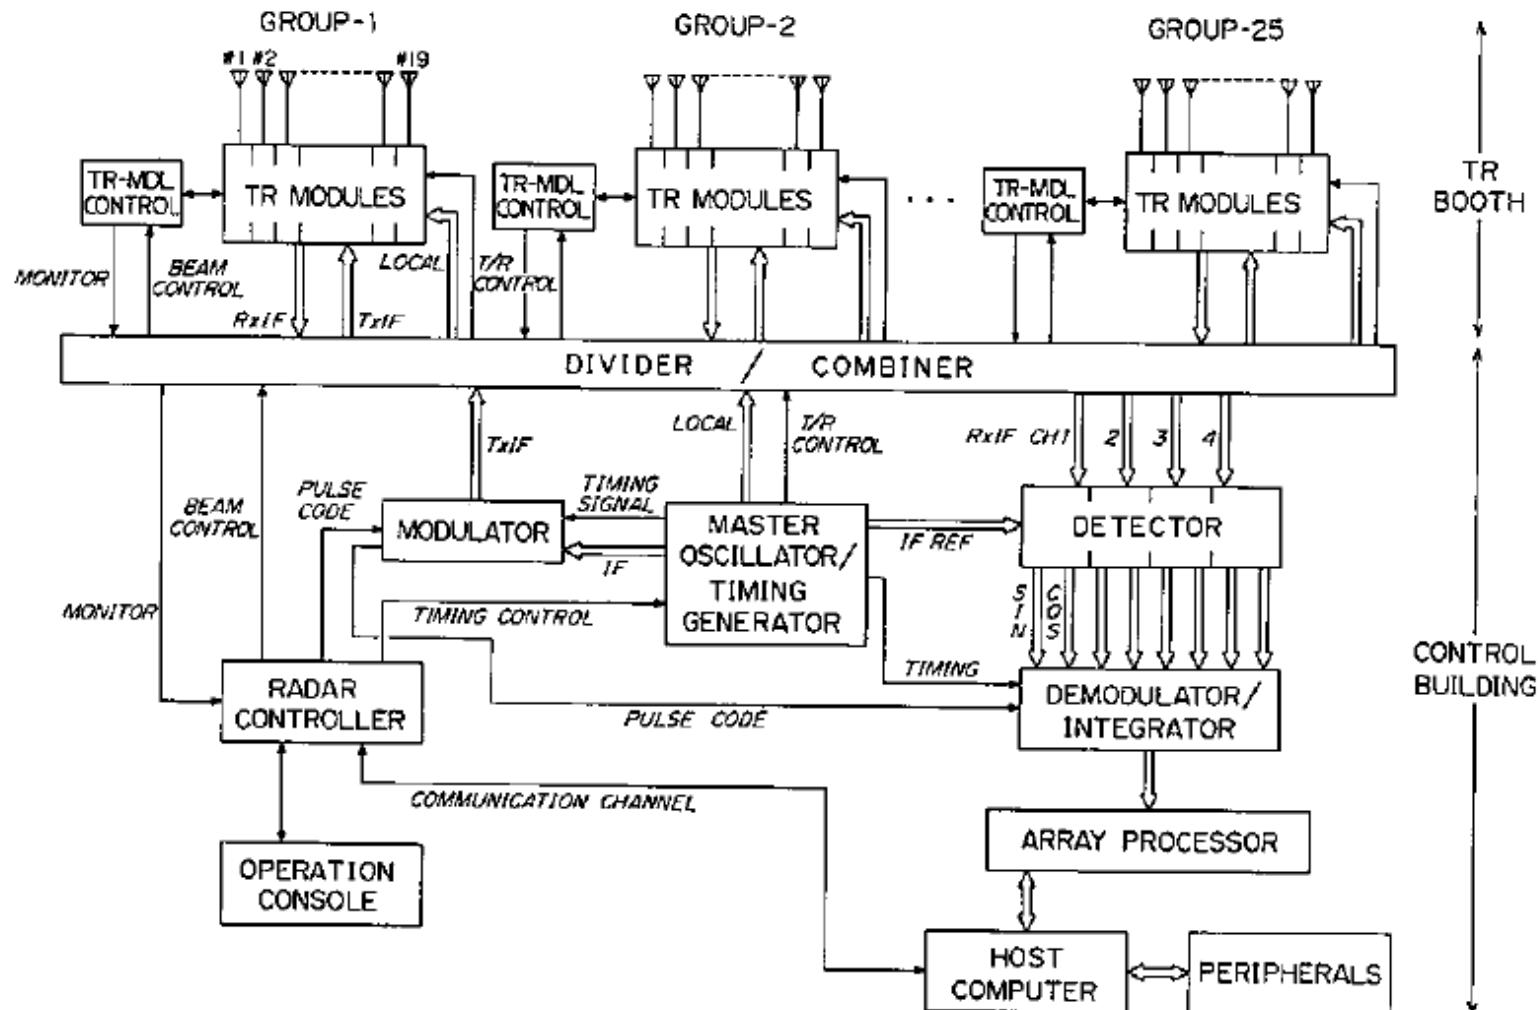

## Comparison of passive and active phased array systems [1] [2]

In conventional radar systems, a high-power transmitter feeds all array elements. Instead in the MU radar system, each element of the phased array is provided with a low power amplifier. All the amplifiers are driven coherently.

# Basic parameters of the MU radar

| Parameter             | Value   |
|-----------------------|---|
| Location              | Shigaraki, Shiga, Japan<br>(34.85°N, 136.10°E)  |
| Radar system          | monostatic pulse radar; active phased array system  |
| Operational frequency | 46.5 MHz  |
| Antenna               | circular array of 475 crossed yagis   |
| aperture              | 8330 m <sup>2</sup> (103 m in diameter)   |
| beam width            | 3.6° (one way; half power for full array)   |
| steerability          | steering is completed in each IPP   |
| beam directions       | 1657; 0°–30° off zenith angle   |
| polarizations         | linear and circular   |
| Transmitter           | 475 solid state amplifiers<br>(TR modules; each with output power of 2.4 kW peak and 120 W average) |
| peak power            | 1 MW (maximum)  |
| average power         | 50 kW (duty ratio 5%)(maximum)  |
| bandwidth             | 1.65 MHz (maximum)<br>(pulse width: 1–512 μs variable)  |
| IPP                   | 400 μs to 65 ms (variable)  |
| Receiver              |   |
| bandwidth             | 1.65 MHz (maximum)  |
| dynamic range         | 70 dB   |
| IF                    | 5 MHz   |
| A/D converter         | 12 bits × 8 channels  |
| Pulse compression     | binary phase coding<br>up to 32 elements; Barker and complementary codes presently in use           |
