A Day at the World’s Fair
SATURDAY, JUNE 20, 1964

Check in Time 9:15 A.M. at Bell Exhibit
See Page 5 for Details
A fundamental device that measures admittance, impedance, and can be used as a VSWR meter over a 20- to 1500-Mc range.

Simple in design... the device consists of three branch coaxial lines... one line contains a conductance standard, another contains a susceptance standard, and the third line connects to the unknown under test. An external voltage source feeds all three lines at their common junction point. Each of the three lines contains an adjustable loop which can be individually rotated to permit sampling of the field within each line. The outputs of these loops are connected in parallel to a null detector.

A voltage null is obtained when the loops in the conductance and susceptance arms are oriented so that their outputs produce a vector sum that counterbalances the conductive and susceptive components of the unknown. A multiplying factor is established by the third loop in the arm leading to the unknown. The multiplying factor times the calibrated settings of the conductance and susceptance loops give directly the value of the unknown. Or, if you prefer, you can add a ¼-wavelength line just ahead of the unknown and get your answer directly in resistance and reactance.

The instrument described above, the Type 1602-B Admittance Meter, $325, in U.S.A.

It is a compact device that offers unmatched speed, accuracy, simplicity, and convenience for both component measurements and impedance matching. Range is up to 10,000 millimhos for conductance or susceptance, and 5000 ohms for resistance and reactance. Basic accuracy is 3%. Because the operating principle is so fundamental, the 1602-B can be used with additional accessories for a wide variety of measuring situations. Available are: a Balun for measurements on balanced lines and circuits; a Component Mount for shielded measurements of components at high frequencies; Terminations for the measurement of reflection coefficient; and a complete line of coaxial adaptors to work with any coaxial system from Microdot to 3½-inch rigid line. A wide variety of oscillators and detectors are also available.

Would you like to know more? Please write for complete information.
Editorial Notes

There will be no issue of "The Newsletter" during July and August. Mark July 25 on your calendar as the deadline for the September issue, and August 25 as the deadline for the October issue.

Like those of you who have followed this year's program, we extend thanks to Roger McSweeney, Program Committee Chairman, for his committee efforts in presenting both varied and interesting subjects for your attention. This is a tangible area for commendation. The members of the Executive Committee, chaired by C. Vadersen, have selflessly contributed their efforts and time to promote the activities of your section.

Through the efforts of the Business Manager and the Editor of "The Newsletter" the objective of getting the publication to you in time for the monthly calendar, has been fulfilled.

At the May General Meeting of the Section, a new slate of officers was elected. In the April and May issues we printed the slate presented by the Nominations Committee. The slate named:

Chairman: John Redmon; Vice Chairman: Walter Glomb; Treasurer: Stephen Mallard; Secretary: J. W. Gordon; Members at Large: Roger McSweeney and John Van Duyne. The balance of the committee will be appointed and the Members of the Committee will be published in the September issue.

As a prelude to summer, we are not going to exhort you to become active in the section. Any attempt to coerce the membership to take part in the planning and operation of the section meets only with resistance and reasons why you can't be active. We'd suggest that you re-examine your thinking and approach the situation in a positive way.

"What can I do to promote interest and activity in the Section?" Membership dues support all the activities of Meetings, Seminars, Publications, and tours. Objectively, what do you derive from your payment of dues?

As we have said before, active, interested members run the section. They are needed not only on the staff of "The Newsletter," but also to staff the many committees and PTGs.

Enjoy your summer.

CALENDAR

June 8, 9, 10
Symposium on Quasi-Optics
Statler Hilton Hotel, N. Y., N. Y.

June 11-12
8th Annual Product Engineering & Production Conference
Pratt Institute, Brooklyn, N. Y.

June 15
Conference on Failure Mechanisms and Reliability
Weston Hall, Newark College of Engineering, Newark, N. J.

June 18
PTG/EWS
"New Developments in Glass"
7:30 P.M. — Pompton Restaurante, 1041 Pompton Avenue (Rte. 23), Cedar Grove, N. J.

June 19
Long Lines Department—Inspection Trip
2:00 P.M. — AT & T
32 Avenue of the Americas, N. Y.

June 20
A Day at the World's Fair
9:15 A.M. — Check in at Bell Exhibit

PTG-Power
7:30 P.M. — Elections
Jersey Central Power & Light
Morris Ave. & Punchbowl Rd., Morristown, N. J.

June 23, 24
Tour: Time Life Data Center
2:00 P.M. — Time Life Data Center
50-51st Street
Avenue of the Americas, N. Y.

July 27-31
Random Processes in Communications Systems
Graduate Center,
Polytechnic Institute of Brooklyn

Volunteers Needed for Newsletter and Committees

The IEEE

Newsletter

Published monthly except July & August by the North Jersey Section of the Institute of Electrical & Electronics Engineers, Inc. Office of Publication: 8 Robin Hood Rd., — Morris Plains, N. J.

Volume 10 June, 1964 No. 10

Deadline for all material is the 25th of the second month preceding the month of publication.

All communications concerning The Newsletter, including editorial matter, advertising, and mailing, should be addressed to:

THE NEWSLETTER
P.O. Box 275 — Morris Plains, N. J.
Telephone: FOXcroft 6-1580

Subscrption: 75¢ per year through due for members; $1.50 per year for non-members.

ABOUT ADDRESS CHANGES

It is not necessary to inform the North Jersey Section when you change your mailing address. The NEWSLETTER and other secection mailings use a list provided by IEEE's national headquarters in New York. This means the Section has no need to maintain a mailing list or addressing plates. Section membership records are changed when Headquarters notifies us.

REPORT ADDRESS CHANGES TO:
INSTITUTE OF ELECTRICAL AND ELECTRONICS ENGINEERS, BOX A, LENOX HILL STATION, NEW YORK 21, N. Y.

Executive Committee Meetings

at Verona Public Library
June 3
NEW! PORTABLE! . . . FOR
CALIBRATING VOLTMETERS,
RECORDERS, OSCILLOSCOPES
(and other ac and dc voltage-sensing devices)

. . . Ballantine's New DC/AC Precision Calibrator

- Portable
- 0-111 volts ac or dc
- RMS or peak-to-peak at 400 or 1000 cps
- 0.15% accuracy
- Digital read-out
- 10% line voltage change causes less than 0.05% change in output voltage

Ballantine's Model 421 DC/AC Precision Calibrator has been designed for easy portability so that it may be taken to the instruments to be checked or calibrated, rather than to require that these instruments be brought to the calibration department. Accuracy and stability of output under conditions of widely varying power line voltage and ambient temperature are necessary requirements. The specifications show how well these requirements have been met. Versatility of output including a wide range of voltage, choice of dc or ac, choice of 400 cps or 1000 cps, and a choice of rms or peak-to-peak, multiply the applications in which Model 421 is useful. A left-to-right digital read-out of whatever voltage is selected, plus the proper location of the decimal point, simplifies its use. There are no adjustments to make other than selecting the desired mode and amplitude. 19 inch relay rack versions are available for fixed installations.

Write for brochure giving many more details

BALLANTINE LABORATORIES INC.
Boonton, New Jersey

CHECK WITH BALLANTINE FIRST FOR LABORATORY VACUUM TUBE VOLTMETERS, REGARDLESS OF YOUR REQUIREMENTS FOR AMPLITUDE, FREQUENCY, OR WAVEFORM. WE HAVE A LARGE LINE, WITH ADDITIONS EACH YEAR, ALSO AC/DC LINEAR CONVERTERS, CALIBRATORS, WIDE BAND AMPLIFIERS, DIRECT-READING CAPACITANCE Meters, AND A LINE OF LABORATORY VOLTAGE STANDARDS 0 TO 1,000 VOLTS.

Represented by GAWLER-KNOOP COMPANY 178 Eagle Rock Ave., Roseland, New Jersey
See us at the NYSERA Show, Syracuse, N. Y., June 9-11.

Engineering Writing and Speech

New Developments in Glass

The June "family" meeting of the North Jersey PTG on Engineering Writing and Speech will hear a talk "New Developments in Glass." Mr. John Gallup of RCA will discuss new kinds of glass in terms familiar to the ladies, who are especially invited.

The dinner meeting will be held at the Pomptonian Restaurant, 1041 Pompton Ave. (Route 23, opposite the Meadowbrook), Cedar Grove, New Jersey, at 7:30 P.M., Thursday, June 18, 1964. Cost of the London broil dinner, including a cocktail, surprise dessert, and gratuities, is $4.00 per person. For reservations please call Mrs. Cook at RCA Harrison, HU 5-3900, Ext. 2119 by Monday, June 15th.

Subject:
Mr. Gallup will explain several new developments in glass, including light-sensitive glass which darkens on exposure to light, new high-strength glass, and "thirsty" Vycor. He will show a Corning Glass Co. color movie "Engineering With Glass" and will demonstrate several of the new glasses.

Speaker:
John Gallup is the Senior Glass Technologist in Electronic Components and Devices at RCA. He is the author of a number of scientific papers and holds several U. S. and foreign patents in the fields of glass and ceramics.

Mr. Gallup received the BS degree in Ceramic Engineering from Alfred University and the MS in Ceramics from Rutgers University. He is a member of several scientific societies and is a licensed Professional Engineer in the State of New Jersey.

Dinner Meeting Notice

Date: Thursday, June 18, 1964
Time: 7:30 P.M.
Place: The Pomptonian Restaurant

Subject: New Developments in Glass
Speaker: John Gallup
Reservations: Mrs. Cook
RCA Harrison
HU 5-3900, Ext. 2119
The Bell System floating wing, 400 feet long, 200 feet wide, 87 feet high, is composed of two major elements: a chair ride and a series of live demonstrations, displays, and audience participation games. The ride tells the story of communication from bongo drums to satellites.

The North Jersey Section of IEEE has arranged a visit to the World's Fair for its members and their families on Saturday, June 20. Selected exhibits and talks will be of particular interest to wives and older children of engineers. The trip will include in the morning tours, available only to IEEE, of the Bell System Exhibit and the Power and Light Exhibit (Tower of Light). After lunch our group will disperse to permit its members and their families to enjoy, on their own, the numerous other Fair attractions.

What We Will See and Hear

The Bell System Exhibit is located at the eastern end of the fairgrounds facing the Pool of Industry. The huge wing-like structure is supported by four slender pylons and appears to be floating in air. A microwave tower rises like a sleek minaret in front of the pavilion.

Inside the "wing" are chair trains on which we will glide past dramatic scenes illustrating the evolution of human communications from tom-tom to satellites... and beyond. Individual loud speakers built into the chairs will enable us to hear the narration.

Following the twelve minute ride, escalators will carry us down to an exhibit hall housing displays, live demonstrations, and audience participation games. We will see the patterns of our voices on a television screen, learn how eyes, ears, and voice work, how crystals are made, how electronic switching systems function, how conversations are carried under oceans, and how machines talk to machines over telephone lines. An experimental telephone service which enables callers to see each other will be demonstrated.

In addition to talks by the regular Exhibit staff, we expect to have several Bell engineers explain technical features of the display in informal talks to our group.

Leaving the Bell Exhibit, we will walk around the Fountain of the Planets to the Tower of Light. The exterior walls of the Tower consist of 600 immense aluminum prisms and the building houses the world's most powerful searchlight whose beam is visible for more than 100 miles on clear nights.

We will enter the Exhibit by a moving ramp over a reflecting pool on to a giant turntable which revolves past seven chambers, stopping at each for a new episode of a musical presentation called "The Brightest Show on Earth." These demonstrate the generation and distribution of power and its use in nearly all activities of our daily lives. Following the show, we will form

500' SHELF
of solid state DC
POWER MODULES

The 1964 Technipower catalog gives you a choice of more than 3600 standard modules, in practically any wattage and temperature rating your design requires. The several hundred most popular models are inventoried in depth, ready for immediate delivery! Included are:

REGULATED AC-DC MODULES — ±0.05% accuracy, 0.5 to 325 VDC, low ripple, temperature ratings 65°C to 115°C;
REGULATED DC-DC CONVERTERS — Wide range of outputs at 15, 30, 60 watts, 24 and 28 VDC input, ±0.5% accuracy;
DC-DC REGULATORS — Low cost, wide range of outputs, ±0.05% accuracy, ideal for local regulated DC from higher voltage bus;

UNREGULATED AC-DC MODULES — 0.7 to 1000 VDC and to 1000 watts, low cost, 80°C temperature rating;
HEAVY CURRENT SCR MODULES — Regulated DC to 2000 watts.
The 1964 catalog also lists heat sinks, rack mounts, and gives complete installation and cooling data. Request your copy now.

smaller groups for visits to the Control Center where the Exhibit engineers will explain technical features of the Tower of Light displays in informal talks for NJ-IEEE.

After the Tower of Light we will walk to the nearby Schaefer's Center for lunch in their restaurant. Schaefer's features hands and footprints of 75 celebrities in the pavement and a gallery of outstanding sports photographs as well as excellent food and drink.

Times and Places to Assemble

Our special tour will start from the base of the microwave (TV relay) tower in front of the Bell System Exhibit promptly at 9:30 A.M. in order to be ahead of the general public who are admitted to the exhibits at 10 A.M. Please be there at 9:15 for check-in.

Our tour of the Tower of Light will commence promptly at 11:15 A.M. Members who are not there at that time will have to wait in line with the general public.

Our luncheon date at Schaefer's Center Restaurant is at 12:30 P.M. Members arriving late will lose their table reservation.

Reservations for the Day

Participants in these special tours will require identifying badges which will be mailed upon receipt of the coupon below and a self-addressed envelope. To facilitate notification in case there are changes in plans, please fill in your telephone number as well as your complete address.

Reserved tables in a good restaurant are a great advantage on a Saturday at the Fair. Members desiring lunch should forward the coupon below as soon as possible since only the first 75 can be accepted. Luncheon tickets will be mailed upon receipt of your check.

All reservations must be received by 15 June to provide time for return mail.

How to Get There and Admission

The easiest way to drive to the Fair from Northern New Jersey is via the George Washington Bridge, Cross Bronx Expressway, Bronx-Whitestone Bridge, Whitestone Expressway, and Van Wyck Expressway to Rodman St. Exit. Turn left after leaving the Expressway into the World's Fair Parking Area which lies between Lawrence St. and the Bell System Exhibit. Allow ninety minutes driving time unless you are familiar with the route, in which case one hour will suffice. World's Fair parking lots open at 8:00 A.M. and the parking charge is $1.50 per day.

The Fair also can be reached via Grand Central Parkway or the Long Island Ex-

Continued on page 7
The North Jersey Section has now completed its first full year of operations as part of the IEEE. It has been a good year, with our merger problems behind us and, most important of all, with our thinking completely oriented in terms of the policies and objectives of the new organization.

The diligent and conscientious effort of many members of the Section has produced some accomplishments that we hope will be of continuing benefit to succeeding administrations. Among these are a set of By Laws and Operating Procedures, developed by Frank A. Polkinghorn with assistance from Al Hirsch and Jim Gordon. If next year's Executive Committee is to thank us for anything done this year, it will surely be for these worthy documents. Progress has also been made in achieving closer relations with the Student Branches in the area. We now have a Student Affairs Committee with three faculty and three student members under the guidance of Chairman Ben Blom, and we look forward to continually building up Section support to student activities.

Under the able leadership of Herb Blaicher, a PTG for Power has been organized and is enthusiastically planning for next year's activities. Our Membership Committee has been reorganized and augmented to deal more effectively with increased numbers and their wide geographical distribution. For this we are indebted to George Tanguay and Ragnar Nilsen. Other contributions to improved Section operations have been made by people too numerous to mention here but my appreciation of their efforts and loyal support is most deep and sincere.

To my fellow officers, Vice Chairman John Redmon, Secretary Steve Mallard and Treasurer John Van Duyne: many braves for their fine work and loyal support. To all of our standing committee Chairmen, my compliments and sincere thanks for their outstanding performance and generous contributions of time and energy. It has been a pleasure and a great privilege to have served with all of you this past year.

Continued from page 6

pressway. Special signs bearing the Unisphere symbol have been posted throughout the New York area to guide motorists.

Subway trains on the IRT Flushing Line run from Times Square and Grand Central to the Fair Station at Willets Point in 20 minutes. Trains leave about every 15 minutes. Trains operate between Penn Station in Manhattan and the Long Island Railroad's World's Fair Station about every 15 minutes in each direction. Running time is 12 minutes and the fare is 50 cents.

Buses to the Fair operate from the George Washington Bridge Bus Terminal, from the West Side Airline Terminal in Manhattan, and from many other points in the Metropolitan area.

Excellent transportation within the fairgrounds is provided by Greyhound buses which circle the periphery and by "Glide-a-Ride" trains which cross the area.

Admission to the Fair is $2.00 for adults and $1.00 for children under 12. Gates open at 9:00 A.M.

Mr. Roger McSweeny, ITT Communication Systems, Inc. 60 South Route 17, Paramus, N. J. (Telephone: 843-2400, Ext. 4223)

Automatic Control

New PTGAC Officers Elected

In last month’s election the members of the North Jersey chapter of the Professional Technical Group on Automatic Control elected a new slate of officers. The PTGAC Executive Committee for 1964-1965 is:

Chairman:
Dr. Andrew U. Meyer
Bell Telephone Laboratories, Inc.

Vice Chairman:
Robert G. Sokalski
Key Electric Company

Secretary:
L. E. Sutton III
Gibbs and Cox, Inc.

The outgoing PTGAC Executive Committee members are George Marmar, chairman; Dr. Andrew U. Meyer, vice chairman; Robert G. Sokalski, secretary. This past year four chapter meetings were held. The topics and speakers were:

Developments in
Modern Control Theory
Dr. Bernard Friedland
Aerospace Research Center
General Precision, Inc.

Information Processing in
Nervous Systems
Leon Harmon
Bell Telephone Laboratories, Inc.

Probabilistic Control
Theory
Prof. Rudolph Drenick
Polytechnic Institute of Brooklyn

The Unconventional in
Inertial Instrumentation
Hugh Riordan
Keckford Division
General Precision, Inc.

Officers of
Fairleigh Dickinson University’s
IEEE Student Branch 1964-1965

Chairman:
Ralph Guenther
149 Wessington Ave.
Garfield, New Jersey
Phone—201 GR. 2-6178

Vice Chairman:
Robert Titone
26 Randolph Ave.
Jersey City, New Jersey
Phone—201 HE. 3-7122

Secretary:
Peter Irwin
426 Main St.
Fort Lee, New Jersey
Phone—201 WI. 4-291

Treasurer:
Louis Kaufer
3 Chapman Drive
Little Ferry, New Jersey
Phone—201 488-6719

PTG

Power

Election Night

An election meeting of the PTG on Power has been scheduled for Monday, June 22, 1964 at 7:30 P.M. The meeting will be held in the Punchbowl Room of the Jersey Central Power & Light Hqtrs. Bldg. located at the corner of Morris Avenue and Punchbowl Rd., Morristown, N. J.

A nominating committee has submitted the following slate of officers for the 1964-65 business year:

Chairman:
Herb Blaicher — Jersey Central Power & Light

Vice-Chairman:

Financial Officer:
Jim Jones — Newark College of Eng.

Meeting & Program Sec'y:

Corresponding & Membership Sec'y:
Charles Siegfried — Public Service Electric & Gas Co.

The term of office is one year. All interested members wishing to participate in the Power Group’s activities are urged to attend this meeting. To become a member of the Power Group send $6 to Dr. Richard M. Emberson c/o IEEE Hqtr., in New York. Indicate your wish to join the PTG-Power.

“Know Your Extinguishers”

BELLEVILLE, N. J. — “Know Your Extinguishers,” a new, four-color wall chart, specifies the appropriate extinguishers for A, B, and C classes of fire and combinations of these types. The chart describes each kind of fire and gives essential data on extinguisher operation and maintenance.

Designed for use where extinguishers may be required and to provide general safety information for all potential extinguisher users, the chart is printed on a durable card measuring 17 x 22 inches.

Copies of “Know Your Extinguishers,” the ABC of Fire Protection,” may be obtained without charge from Walter Kidde & Company, Inc., Belleville, N. J. 07109, or from Kidde agents listed in the Yellow Pages and international representatives.

GAS ANALYSES

M. Grosvalet
Compagnie Generale De Telegraphie
Sans Fil, France
Mechanisms of Instability and Evolution in the MDS System of Insulated Gate Field Effect Devices
Allen Stansbury
Quantum Laboratories
Noise Analysis and Failure Mechanisms in Electronic Components

The various types of noise generated in electronic components will be described, including those whose characteristics can be predicted as opposed to those whose characteristics must be measured. These latter types can be a valuable tool in locating and analyzing failure mechanisms in components. A description of the techniques used and their applications to resistors, transistors, and diodes will be given along with case histories where noise analysis has been used successfully to predict reliability.

J. L. Easterday
Battelle Memorial Institute
Analysis of Fixed Resistor Failure and Life Test Data

Data have been analyzed to determine the most common modes of failure of final resistors and the conditions which produce these failures. In addition, studies have been made of the degradation of parameters and of the change in the distribution of these parameters resulting from extended life tests. These data provide a valuable input in reaching decisions as to the best part for specific applications.

Alonzo Bulfinch
Picatinny Arsenal
Unbiased Estimates of Non-Time Dependent Reliability

It is assumed that an item will not fail until the stress exceeds the strength. From this premise non-time dependent reliability is defined as the probability of the strength exceeding the stress.

It is assumed that reliability is created by building a margin of safety into an item during the development phase of the life cycle. Techniques for determining reliability through direct and indirect measurements of margins of safety are described. It is shown that unbiased estimates of reliability at any level can be obtained with small sample sizes. It is also shown that only the precision with which the reliability is known (not the accuracy) is dependent upon the sample size.

The difference between the reliability and the properties measured by classical quality assurance techniques is pointed out. A method for avoiding the dilemma of zero failures is described.
New Techniques and Economy

Integrated circuitry, thin films, hybrid microcircuits, optoelectronics technology, high energy rate processes, electron beam processes and use of lasers in production are some of the subjects to be discussed at this eighth annual Conference of the IEEE Professional Technical Group on Product Engineering and Production. Theme of the two-day meeting is "The Engineering Approach to Design and Production for Economy."

The question "Can We Afford to Mechanize?" will be discussed by J. A. Hoford, Western Electric Company, Princeton Lab. at the luncheon on Thursday, June 11th. General Chairman of the Conference is Walter B. Ellwood of Bell Telephone Labs.; Ralph Batcher, consultant, is Program Chairman.

Eighteen invited papers will be presented during the two morning and two afternoon sessions. Papers will be available in Proceedings form so that the speakers will be free in verbal presentation and attendees can prepare questions for discussion in advance.

REGISTRATION:

Two lunches and copy of Proceedings included in Registration Fee

Members (2 days) $20.00
Non-Members 23.00

Proceedings (after meeting) 8.00

Economy accommodations in Pratt Institute Dormitory, with free parking, are available to advance registrants (while they last). Price of single room is $4.50 per night per person; double occupancy is $8.00 per night. One floor is reserved for married couples. Subway to World's Fair Ground (15 cents). Stay over privileges for weekend.

For all advance registrations for Conference, contact: APEPC, 111 West 23rd St., New York 63, New York.

TECHNICAL PROGRAM

Session I, Thursday June 11, 9:00 A.M.-12:00 Noon
Theme - Thin Film Processes
K. H. Biermecht, Bell Telephone Laboratories
"The Deposition of Thin Films, Evaporation, Sputtering and other Deposition Processes"
A. Stuart Tulk, Sylvania
"Vacuum Deposition"
Coffee Break
J. W. Knoll and P. Margolin,
"Three-Dimensional Integrated Circuit Modules"
W. D. Fuller
Electronic Space Laboratories, Lockheed
"Optoelectronics, a New Technology for Product Designers"

Luncheon - 12:15-1:45 P.M.
Speaker - J. A. Hoford,
Western Electric Company
"Production Problems of the Future"

Session II, Thursday June 11, 2:00P.M.-5:00 P.M.
Theme - Planning for Production
R. P. Cloggert, Western Electric Company
"Philosophy of Mechanization"
A. Hanfman, Western Electric Company
"Accelerated Planning - A Mathematical Model and Examples"
W. L. Hack, Western Gold and Platinum
"Modern Brazing Practices in Electronics"
Coffee Break
F. P. Iles, Autonetics Division,
North American Aviation
"Development of a Thin Film Microcircuit Facility"
A. P. Kingshahy, Photocircuits, Incorporated
"Designing Printed Circuits for Functional Economy"

Session III, Friday June 12, 9:00 A.M.-12:00 Noon
Theme - Modern Packaging Techniques
J. Goldstein,
General Instrument Corporation
"Silicon Hybrid Microcircuits"
M. Auriana, Omantron Division, Burndy
"Design in Memory Matrix Planes and Their Interconnection"
Coffee Break
C. Greenwald and H. G. Nordlin,
Federal Laboratories, ITT
"Application of Thin Film Technology to Microwave Equipment"
H. G. Renaud, Photochemical Products
"Integrated Circuit Packaging"

Luncheon - 12:15-1:45 P.M.
Speaker - L. H. Niemann,
Department of Commerce
"Economy and International Competition"

Session IV, Friday June 12, 2:00 P.M.-5:00 P.M.
Theme - High Energy Rate Processes
J. Rothstein, Lit/EE Electronics
"Survey of High Energy Rate Techniques"
D. J. Garibotti and L. R. Ullery,
Hamilton Standard Division, United Aircraft
"Electron Beam Processing"
D. F. Brower, Magneforce Division,
"Magneform Processes and Their Applications"

Coffee Break
L. Earcollino and J. Kennedy,
Grumman Corporation

NY Section
Basic Sciences & PTG

A.T.& T. NETWORK MANAGEMENT CONTROL CENTER TOUR

A trip through some of the operations of the Long Lines Department of the American Telephone and Telegraph Company at 32 Avenue of the Americas, New York City, is being sponsored by the Communication and Electronics Division of the New York Section of the IEEE for June 19, 1964 at 2 P.M. The tour, which will last about 2 hours, will include a visit to the Network Management Control Center responsible for the operation of the vast communication network of circuits and switching equipment that serves over 81 million telephones and about 60,000 teletypewriter machines. On an average day, this network handles more than 31/2 million messages.

The trip is limited to 40 persons and advanced registration is required. Requests for tickets will not be considered after June 15. To register use the coupon below.

To: J. J. Grumblatt, 10th Floor
GT&E Service Corporation
730 Third Avenue
New York 17, New York

Please send me .......... tickets for the inspection trip to the Long Lines Department of the American Telephone & Telegraph Co. Please list the name and Company affiliation for each ticket requested.

Name .............................................

A field trip for IEEE members to IBM's Time-Life Data Center has been scheduled by the Communication and Electronics Division.

The tour can accommodate only 20 persons at a time, and, therefore, has been scheduled for two days: Tuesday, June 23, and Wednesday, June 24. It will start on both days at 2:00 P.M. The Place: Time-Life Data Center, Concourse Level of the Time-Life Building, between 50 and 51st Streets, Avenue of the Americas (6th Avenue), New York. It promises to be a good demonstration of equipment being described in the current Communication and Electronics Lecture Series "The Digital Computer as an Engineering Tool."

Due to the limited capacity, registration must be made before June 16. Complete the following and send to J. J. Grumblatt, GT&E Service Corporation, 730 Third Avenue, New York, New York, or call him at 212-551-1393.

Yes, I'd like to attend the tour of the Time-Life Data Center on:

□ Tuesday, June 23 (only day I can make it).
□ Wednesday, June 24 (only day I can make it).
□ Either day will be fine.

Type 585A / 82 unit features

- **Dual-Trace Operation** with 4 operating modes and independent controls for each channel—for individual attenuation, positioning, inversion, and ac or dc coupling as desired.
- **Passband** typically DC-TO-85 MC (3-db down) at 100 mv/cm (12-db down at 150 Mc), and typically DC-TO-80 MC (3-db down) at 10 mv/cm.
- **Calibrated Sensitivity** in 9 steps from 100 mv/cm to 50 v/cm, and in 10X Amplifier Mode, from 10 mv/cm to 5 v/cm, variable between steps.
- **Internal and External Triggering** to 150 Mc.
- **Sweep Range** from 10 nsec/cm to 2 sec/cm.
- **Single-Sweep Photography** at 10 nsec/cm.
- **Calibrated Sweep Delay** from 2 microseconds to 10 seconds.

For a demonstration, call your Tektronix Field Engineer.

**plus**

- **Compatibility with 17 Letter-Series Plug-Ins** to permit differential, multi-trace, sampling, other laboratory applications—when used with Type 81 adapter.
  - Type 585A Oscilloscope . . . . . $1725
  - Type RM585A Oscilloscope . . . . . $1825
  - Type 581A Oscilloscope . . . . . $1425
  
  No sweep-delay capabilities, but other features similar to Type 585A.
  - Type 82 Dual-Trace Unit . . . . . $ 650
  - Type 86 Single-Trace Unit . . . . . $ 350
  - Type 81 Plug-In Adapter . . . . . $ 135
  
  Allows insertion of 17 Tektronix letter-series plug-ins. Band-width (up to 30 Mc) and Sensitivity depend upon plug-in used.

U.S. Sales Prices, f.o.b., Beaverton, Oregon

Hewlett-Packard Model 5254A Frequency Converter increases the range of your 5245L Electronic Counter to 2500 mc.

More advantages of Model 5254A:
- RETAINS ACCURACY OF BASIC COUNTER.
- PLUGS INTO HP MODEL 5245L.
- EASY TO OPERATE.

Model 5254A operates by counting the difference between the unknown frequency and a known multiple of 50 mc. Precise readings are readily obtained. A level indicator speeds tuning.

Since the operation of this equipment is simple and convenient, nontechnical production personnel can make frequency measurements to 2500 mc quickly and accurately.

Why not call your RMC Field Engineer for full specs and application data on Model 5254A priced at $825?

It's Boonton Radio's Type 8925A DME/ATC Test Set... And it's specifically designed for testing and calibrating Distance Measuring Equipment (DME) and Air Traffic Control (ATC) Transponder aircraft equipment.

Type 8925A is a complete, calibrated system for use by commercial and corporate air line operations, airborne equipment mfrs, and aircraft service shops.

Features of this new test set:
- COVERS ALL PRESENT AND PROPOSED DME CHANNELS.
- PROVIDES SIMULATION OF TACAN BEARING INFORMATION.
- MEASURES TRANSMITTER POWER OUTPUT TO ±0.6 DB.
- PROVIDES DIRECT READOUT OF ATC REPLY FREQUENCY.

This Test Set is rack cabinet mounted and completely self-contained with the exception of video modulators. It consists of a continuously tuneable signal generator, direct reading frequency counter, solid-state modulator, frequency meter, peak power measuring system.

$12,415 is price of this Test Set... Your RMC Field Engineer has full specs (and leasing details).
